Jürgen Renn

Mechanik Von Den Newtonschen Gesetze 2nd Edition:

The Genesis of General Relativity Jürgen Renn, 2007-06-17 The transition from classical to modern physics in the first half of the twentieth century by quantum and relativity theories affected some of the most fundamental notions of physical thinking such as matter radiation space and time This transition thus represents a challenge for any attempt to understand the structures of a scientific revolution The present four volume work aims at a comprehensive account of the way in which the work of Albert Einstein and his contemporaries changed our understanding of space time and gravitation The conceptual framework of classical nineteenth century physics had to be fundamentally restructured and reinterpreted in order to arrive at a theory of gravitation compatible with the new notions of space and time established in 1905 by Einstein's special theory of relativity Whereas the classical theory of gravitation postulated an instantaneous action at a distance Einstein's new relativistic kinematics rather suggested an analogy between the gravitational field and the electromagnetic field propagating with a finite speed It is therefore not surprising that Einstein was not alone in addressing the problem of formulating a theory of gravitation that complies with the kinematics of relativity theory The analysis of these alternative approaches as well as of earlier alternative approaches to gravitation within classical physics turns out to be crucial for identifying the necessities and contingencies in the actual historical development Henri Poincaré Membre de L'Institut Wissenschaft und Hypothese F. Lindemann, L. Lindemann, 1914 International Catalogue of Scientific Literature [1901-1914], 1902 *Boston Studies in the Philosophy of Science*, 2007 Inertia and Gravitation Herbert Pfister, Markus King, 2015-02-24 This book focuses on the phenomena of inertia and gravitation one objective being to shed some new light on the basic laws of gravitational interaction and the fundamental nature and structures of spacetime Chapter 1 is devoted to an extensive partly new analysis of the law of inertia The underlying mathematical and geometrical structure of Newtonian spacetime is presented from a four dimensional point of view and some historical difficulties and controversies in particular the concepts of free particles and straight lines are critically analyzed while connections to projective geometry are also explored The relativistic extensions of the law of gravitation and its intriguing consequences are studied in Chapter 2 This is achieved following the works of Weyl Ehlers Pirani and Schild by adopting a point of view of the combined conformal and projective structure of spacetime Specifically Mach's fundamental critique of Newton's concepts of absolute space and absolute time was a decisive motivation for Einstein's development of general relativity and his equivalence principle provided a new perspective on inertia In Chapter 3 the very special mathematical structure of Einstein's field equations is analyzed and some of their remarkable physical predictions are presented By analyzing different types of dragging phenomena Chapter 4 reviews to what extent the equivalence principle is realized in general relativity a question intimately connected to the new force of gravitomagnetism which was theoretically predicted by Einstein and Thirring but which was only recently experimentally confirmed and is thus of current interest Jahrbuch über die Fortschritte der Mathematik, 1927 **International Catalogue of Scientific**

Newton und die Relativität Francesco Cester, 2025-05-13

Es ist allgemein bekannt, dass die Gleichung $E = mc^2$ eine Folge der Relativitätstheorie ist. Wenig bekannt ist jedoch, dass es auch eine einfache Demonstration dieser Beziehung durch Einstein gibt, die aus den Gesetzen der klassischen Physik abgeleitet wurde. Dies war der erste Schritt auf einem alternativen Weg, der zur Relativitätstheorie führte. Dieser neue Ansatz, der mehr als ein Jahrhundert lang ignoriert wurde, ist nun in der vorliegenden Arbeit untersucht worden. Es wird gezeigt, dass die Äquivalenz von Energie und Masse in Verbindung mit dem zweiten Gesetz der Dynamik einen logischen und intuitiven Übergang von der Newtonschen zur Relativistischen Mechanik ermöglicht. Das Buch *Newton und die Relativität* veranschaulicht die überraschenden Ergebnisse dieser Untersuchung. Der Autor Dr. Ing. Francesco Cester, 1948 in Rom geboren, Studium des nuklearen Ingenieurwesens bei der Universität degli Studi di Roma. E-Mail: NewtonAndRelativity@gmx.de. Webseite: <https://newtonrelativity.com>
