Mechanisms Of Cutaneous Sensation:

Mechanisms of Cutaneous Sensation David Cecil Sinclair, 1981 *Cutaneous Innervation* William Montagna, 2013-10-22 Advances in Biology of Skin Vol I Cutaneous Innervation focuses on the biology of skin including the chemistry of the ground substance of the dermis to the biology of sebaceous glands The selection first offers information on the pattern of cutaneous innervation of the human hand foot and breast and similarities in cutaneous nerve end organs Discussions focus on the methods of study observations histochemical reactions and function of end organs The text then examines the autonomic innervation of the skin cholinesterases in the cutaneous nerves of man and the relation of nerve fiber size to modality of sensation The manuscript ponders on the central paths of the afferent impulses from skin that arouse sensation and studies related to the mechanism of common sensibility including materials and methods anatomical and physiological observations and interpretation of observations The publication also takes a look at the structures and processes involved in the sensation of itch and the pathophysiology of itch sensation The selection is a dependable reference for readers interested in the biology of skin *Studies in Physiology* David R. Curtis, Archibald K. McIntyre, 2012-12-06 This collection of papers is presented to Sir JOHN ECCLES by his former and present collaborators to commemorate the award of the 1963 Nobel Prize in Medicine which was shared with A L HODGKIN and A F HUXLEY Sir JOHN S interest in and influence on the study of physiology particularly that of the nervous system is reflected by the range of topics discussed and by the distribution of the various authors in laboratories throughout the world Those who have been privileged to work with him in Oxford Sydney Dunedin or Canberra have enjoyed a good discipline in scientific thought as well as in the use of neurophysiological techniques Basic knowledge is always transferable and the inspiration which comes from association with a great scientist is not confined to anyone field of physiology The contributors to this volume were requested to review briefly that aspect of physiology of current interest to them and it is hoped that the resulting papers will serve as an up to date review of many physiological problems The editors are greatly indebted to the publishers Springer Verlag particularly to Dr H GOTZE for his advice and interest It is also a pleasure to thank Mrs H WALSH for her unfailing assistance during the preparation of this book Canberra Melbourne 1965 III CONTENTS Rhythmic thalamic activity P Andersen **Sensory Mechanisms**, 1966-01-01 **Sensory Mechanisms A Physiological Approach to Clinical Neurology** James W. Lance, James G. McLeod, 2013-10-22 A Physiological Approach to Clinical Neurology Third Edition is a 13 chapter book that first describes pain and other sensations weakness neuromuscular disorders spinal reflexes as well as muscle tone and movement This text also explores the disordered muscle tone a term used to describe the sensation of resistance felt by the clinician as he manipulates a joint through a range of movement with the subject attempting to relax Other chapters discuss the basal ganglia and their disorders and the cerebellum and its disorders The anatomy and physiology of the special senses cranial nerves and autonomic nervous system are also explained The last three chapters elucidate consciousness

Spinal Afferent Processing T.L. Yaskh,2013-06-29 Some 29 scientists from the fields of neuroanatomy neurochemistry neurophysiology neuropharmacology and behavior have contributed their efforts to this testimonial on behalf of the contributions made by Dr F W L Kerr to science and to those with whom he interacted The intention of the contributors to this volume was to deal with the manifold advances that pertain to the substrates in spinal cord relating to the processing of sensory information a subject that in one form or another provoked time and again Kerr's native enthusiasm for research The organization of the book follows a natural course from the peripheral innervation of the somatic and visceral organs Winkelmann Chapter 2 to the effective stimuli that activate these fibers and give rise to sensation under normal and pathological conditions Campbell and Meyer Chapter 3 Dubner and colleagues Chapter 13 Dyck Chapter 14 to the course these afferent systems take to enter the spinal cord Coggeshall Chapter 4 and to the organization of the systems through which this afferent information reaches the brain Willis Chapter 11 Vierck and colleagues Chapter 12 Sensory Mechanisms of the Spinal Cord William D. Willis Jr.,Richard E. Coggeshall,2013-06-29 The third edition of this monograph continues to have the goal of providing an overview of current thought about the spinal cord mechanisms that are responsible for sensory processing We hope that the book is of value to both basic and clinical neuroscientists Several changes have been made in the presentation as well as additions because of the research advances that have been made during the past decade Chapters 3 and 4 in the previous edition have been subdivided and now the morphology of primary afferent neurons of the dorsal root ganglia is described in Chapter 3 and the chemical neuroanatomy of these neurons in Chapter 4 The description of the dorsal horn in the previous Chapter 4 is now included in Chapter 5 and the chemical neuroanatomy of the dorsal horn in Chapter 6 Furthermore discussions of the descending control systems have now been consolidated at the end of Chapter 12 The authors would like to express their appreciation for the help provided by several individuals R E C wishes to acknowledge the many things he learned about primary afferent neurons from conversations with Dr S N Lawson He also thanks Lyn Shilling for her assistance with the typing WDW thanks Dr Nada Lawand for her critical reading of parts of the manuscript Rosaline Leigh for help with the manuscript and Griselda Gonzales for preparing the illustrations
