Mechanisms of Speech Recognition W. A. Ainsworth, 2014-05-18 Mechanisms of Speech Recognition explores the mechanisms underlying speech recognition Topics covered include the auditory system speech production auditory psychophysics speech synthesis and analysis vowel and consonant recognition and perception of prosodic features and of distorted speech Automatic speech recognition and models of speech recognition are also given consideration This volume consists of 11 chapters and begins with an overview of speech recognition communication and production More specifically it examines the way in which the organs of the vocal apparatus are employed to transform a message consisting of a string of linguistic units such as words or phonemes into a wave of continuous sounds which are recognized as speech The auditory system and its parts are then described from the ears to the organ of Corti and nerve cells The chapters that follow focus on the behavior of the hearing system the various techniques of analyzing speech sounds and speech synthesizers such as vocoders The mechanisms underlying the recognition of vowels and consonants are also described along with the physical parameters of the speech wave which signal the prosody of an utterance the effects of distortions in the speech wave on speech perception and tools used in automatic speech recognition The book concludes with an evaluation of models of speech recognition This book will be of interest to phoneticians linguists physiologists psychologists and physicists **Mechanisms**

Coussé, Steffen Höder, Benjamin Lyngfelt, Julia Prentice, 2023-11-15 This volume presents eight studies of linguistic phenomena in Nordic languages notably Danish Norwegian and Swedish from a construction grammar perspective The contributions both deepen and widen the focus of construction grammar applied to Nordic languages by dealing with a variety of topics such as the constructional network pseudo coordination additional language learning and emerging multilingualism prototypical semantics in argument structure constructions and domain specific discourse and language behavior The volume showcases the vibrant research activity within part of the construction grammar community dealing with Nordic languages contributing to the knowledge about the structure use and learning of these languages as well as to the field of construction grammar as a whole *Methods of Statistical Physics* A. I. Akhiezer, S. V. Peletninskii, 2013-10-22

Methods of Statistical Physics is an exposition of the tools of statistical mechanics which evaluates the kinetic equations of classical and quantized systems The book also analyzes the equations of macroscopic physics such as the equations of hydrodynamics for normal and superfluid liquids and macroscopic electrodynamics The text gives particular attention to the study of quantum systems This study begins with a discussion of problems of quantum statistics with a detailed description of the basics of quantum mechanics along with the theory of measurement An analysis of the asymptotic behavior of universal quantities is also explained Strong consideration is given to the systems with spontaneously broken symmetries Theories such as the kinetic theory of gases the theory of Brownian motion the theory of the slowing down of neutrons and the theory of transport phenomena in crystals are discussed The book will be a useful tool for physicists mathematicians students and researchers in the field of statistical mechanics

Lectures on Selected Topics in Statistical Mechanics D. Ter Haar, 2013-09-03 Lectures on Selected Topics in Statistical Mechanics is a collection of lectures given at the 1971 Simla Summer School of Statistical Mechanics held in India The lectures explore a wide range of topics related to statistical mechanics including occupation number representation the Green function method the pair Hamiltonian model of an imperfect Bose gas fluctuations in a perfect Bose gas and the equation of state of an imperfect gas A simple derivation of the Bloch equation is also presented along with the statistical mechanics of stellar systems Comprised of eight chapters this volume begins with a discussion on the occupation number representation by considering some relevant formulae from ensemble theory Classical petit and grand ensembles are described together with quantum petit and grand ensembles Subsequent chapters focus on the Green function method in statistical mechanics the pair Hamiltonian model of the imperfect Bose gas and its solution in the absence of Bose Einstein condensation using Green function methods and diagrammatic techniques fluctuations in a perfect Bose gas the equation of state of an imperfect gas and a simple derivation of the Bloch equation Finally the statistical mechanics of stellar systems and an approach to equilibrium are described This book will be of interest to physicists

Quantum Mechanics A. S. Davydov, 2013-10-22 Quantum Mechanics Second Edition discusses the fundamental concepts and governing principles of quantum mechanics The title details the physical ideas and the mathematical formalism of the quantum theory of the non relativistic and quasi relativistic motion of a single particle in an external field The text first covers the basic concepts and then proceeds to tackling the change of quantum states in time Next the selection examines the connection between quantum mechanics and classical mechanics The book also discusses the simplest applications of quantum mechanics along with the elementary representation theory The book will be most useful to students of physics who are studying quantum mechanics The text will also serve expert quantum physicists as a reference
