Gdoutos, Zaira Marioli-Riga, 2013-04-17 This book contains 31 papers presented at the symposium on Recent Advances in Composite Materials which was organized in honor of Professor Stephanos A Paipetis. The symposium took place at Democritus University of Thrace in Xanthi Greece on June 12-14, 2003. The book is a tribute to Stephanos A Paipetis, a pioneer of composite materials, in recognition of his continuous original diversified and outstanding contributions for half a century. The book consists of invited papers written by leading experts in the field. It contains original contributions concerning the latest developments in composite materials. It covers a wide range of subjects including experimental characterization, analytical modeling and applications of composite materials. The papers are arranged in the following six sections: General concepts, stress and failure analysis, mechanical properties, metal matrix composites, structural analysis and applications of composite materials. The first section on general concepts contains seven papers dealing with composites through the pursuit of the consilience among them: computation and mechatronic automation of multiphysics research, a theory of anisotropic scattering wave propagation, multi-material composite wedges, a three-dimensional finite element analysis around broken fibers and an in situ assessment of the micromechanics of large scale bridging in ceramic composites. **Recent Advances in Composites in the United States and Japan** Jack R. Vinson, 1985 Applications of Continuum Damage Mechanics to Fatigue and Fracture David L. McDowell, 1997 Contains papers from the May 1996 Symposium on Applications of Continuum Damage Mechanics (CDM) to Fatigue and Fracture. Papers in Section I deal with various aspects of modeling damage in composite materials such as high temperature environmental degradation, fatigue and viscous damage in metal, a
