Site Matters Carol Burns, Andrea Kahn, 2005 This volume through theoretical essays and empirically grounded pieces on Le Corbusier's designs contemporary suburbs and the planning agendas of the World Trade Center site provides theory on the appreciation of site and context in architecture *Architectural Intelligence*
Molly Wright Steenson, 2022-11-01 Architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity In *Architectural Intelligence* Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work Christopher Alexander Richard Saul Wurman Cedric Price and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day Alexander long before his famous 1977 book *A Pattern Language* used computation and structure to visualize design problems Wurman popularized the notion of information architecture Price designed some of the first intelligent buildings and Negroponte experimented with the ways people experience artificial intelligence even at architectural scale Steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology What did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems And what was this new space that emerged within these collaborations At times Steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture The projects Steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments Alexander Wurman Price and Negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities Designing the British Post-War Home Fiona Fisher, 2015-04-10 In *Designing the British Post War Home* Fiona Fisher explores the development of modern domestic architecture in Britain through a detailed study of the work of the successful Surrey based architectural practice of Kenneth Wood Wood's firm is representative of a geographically distinct category of post war architectural and design practice that of the small private practice that flourished in Britain's expanding suburbs after the removal of wartime building restrictions Such firms which played an important role in the development of British domestic design are currently under represented within architectural histories of the period The private house represents an important site in which new spatial material and aesthetic parameters for modern living were defined after the Second World War Within a British context the architect designed private house remained an important vehicle for the investigation of architectural ideas by second generation modernist architects and

designers Through a series of case study houses designed by Wood's firm the book reconsiders the progress of modern domestic architecture in Britain and demonstrates the ways in which architectural discourse and practice intersected with the experience performance and representation of domestic modernity in post war Britain **Special Relations** Howard Malchow, 2011-02-18 A study of Anglo American cultural and countercultural exchange from the mid Fifties to the mid Seventies *Special Relations* explores aspects of London modernism the anti war movement student rebellion black power the second wave feminist and gay liberation movements and transatlantic nostalgia *Demolishing Whitehall* Adam Sharr, Stephen Thornton, 2013 This book is about a lost world albeit one less than 50 years old In the era of Harold Wilson's white heat architect Sir Leslie Martin proposed a grand plan to demolish and rebuild a swathe of historic Whitehall London's government district At once optimistic and paternalistic it simultaneously reinforced and challenged a rigidly hierarchical social order at the scales of building city and nation This project was never realized but nevertheless the plans and the political history surrounding them offer unique insights into Wilson's government Wilson's Britain and Martin's distinctive scientific model of architecture and more broadly into the connections between architecture politics and society

Architecture Thinking across Boundaries Rajesh Heynicks, Ricardo Costa Agarez, Elke Couchez, 2021-01-14 While most studies on the history of architectural theory have been concerned with what has been said and written this book is concerned with how architecture theory has been created and transmitted *Architecture Thinking across Boundaries* looks at architectural theory through the lens of intellectual history Eleven original essays explore a variety of themes and contexts each examining how architectural knowledge has been transferred across social spatial and disciplinary boundaries whether through the international circulation of ideas transdisciplinary exchanges or transfers from design practice to theory and back again Dissecting the frictions transformations and resistances that mark these journeys the essays in this book reflect upon the myriad routes that architectural knowledge has taken while developing into architectural theory They critically enquire the interstices geographical temporal and epistemological that lie beyond fixed narratives They show how unstable vital and eminently mobile the processes of thinking about architecture have been
