New Forms Of Consumption Consumers Culture And Commodification:

New Forms of Consumption Mark Gottdiener, 2000-11-01 Consumption as a field of cultural studies overlaps with theories of postmodernism the social construction of self commodification in late capitalism and the role of mass media in daily life New forms of consumption such as those facilitated by cyberspace themed environments the commodification of sex and the increasing role of leisure in society all play new and interesting roles in daily life that combine consumerism with the most contemporary social forms This collection of essays examines the recent ways in which consumerism has been approached by cultural studies with special emphasis given to these and other newly emerging topics The book is divided into three parts The first part provides a theoretical overview of consumption studies dealing with classical and more contemporary approaches in light of the debate between advocates and critics of postmodernism In this section there are papers on McDonaldization tourism and cultural studies and the Theory of Shopping The second part emphasizes empirical studies of the commodification process Papers address the transformation of women's bodies and the mass commodification of milk the creation of the toddler as a subject and the commodification of childhood the commodification of sports and the commodification of rock music The third section of the book explores new forms of consumption on a more detailed and concentrated level Papers in this section include the rise of sex tourism as a global industry the commodification of the sacred and the emergence of new consumer spaces in the city An introduction by the editor delineates the advantages of his approach to new forms of consumption based squarely in the emerging issues of cultural studies debates transcending postmodernism and the society of the spectacle

The Economics of Science: A Critical Realist Overview David Tyfield, 2012-06-12 Dramatic and controversial changes in the funding of science over the past two decades towards its increasing commercialization have stimulated a huge literature trying to set out an economics of science Whether broadly in favour or against these changes the vast majority of these frameworks employ ahistorical analyses that cannot conceptualise let alone address the questions of

why have these changes occurred and why now Nor therefore can they offer much insight into the crucial question of future trends Given the growing importance of science and innovation in an age of both a globalizing knowledge based economy itself in crisis and enormous challenges that demand scientific and technological responses these are significant gaps in our understanding of important contemporary social processes This book argues that the fundamental underlying problem in all cases is the ontological shallowness of these theories which can only be remedied by attention to ontological presuppositions Conversely a critical realist approach affords the integration of a realist political economy into the analysis of the economics of science that does afford explicit attention to these crucial questions a cultural political economy of research and innovation CPERI Accordingly the book sets out an introduction to the existing literature on the economics of science together with novel discussion of the field from a critical realist perspective In arguing thus across levels of abstraction however the book also explores how concerted engagement with substantive social enquiry and theoretical debate develops and strengthens critical realism as a philosophical project rather than simply applying it While the first of these two volumes argues how mainstream economics is inadequate to the task of an explanatory and critical economics of science the challenge in this second volume is to examine the strengths and weaknesses of disciplines offering more promising starting points Two social scientific disciplines are particularly promising candidates starting from economy or science namely heterodox political economy and science technology studies respectively Synthesising these into an economics of science however still encounters considerable hurdles in that there remain some fundamental and mutual philosophical incompatibilities Formulating an economics of science thus demands that both economics and science be redefined The book explores how a critical realist approach affords some common ground upon which this productive synthesis may be pursued in the form of a cultural political economy of research and innovation CPERI

Law for Sale Johanna Stark, 2019-02-21 Common markets open borders air traffic and the internet have made it faster and less expensive to change places and jurisdictions As a result legal forums are increasingly treated as a good that is subject to the market mechanism Individuals and corporations increasingly have free reign to choose which legal rules to apply to their company their contract their marriage or their insolvency proceedings States in turn grant these opportunities and respond to demand by competing with other suppliers of legal regimes Regulatory competition describes a dynamic in which states as

producers of legal rules compete for the favour of mobile consumers of their legal products This book focuses on the philosophical underpinnings problems and consequences of such regulatory competition It argues that there is a mismatch between regulatory competition as a policy approach and the beliefs and commitments that shape our thinking about law and the state It concludes that law markets are potentially at odds with both our conception of the functions of legal rules and of key political ideals and principles such as democracy state autonomy and political authority
