Pediatrics Marvin I. Gottlieb, Janice E. Williams, 2013-11-11 Child adolescent development and behavior have been a traditional concern of primary health care providers However it was not until the mid 1960s that attempts were made to consolidate developmental behavioral issues into an identifiably distinct fund of medical knowledge During the ensuing two decades developmental behavioral pediatrics was recognized as a clinical and research subspecialty within the framework of comprehensive health care for children The influence of public advocacy groups topic dedicated journals national professional specialty societies subject related continuing education programs and federal legislation PL94 142 has served to crystallize developmental behavioral pediatrics as a specialized field of study As a consequence during the past ten years significant modifications have restructured medical student and pediatric resident education providing an emphasis on

developmental behavioral issues The focus on neurodevelopmental educational and psychosocial issues reflects changing priorities in traditional health care for children The postgraduate training of pediatric fellows in two and three year training programs was initiated to accommodate professional manpower needs in both academic and practice settings Many of the problems in childhood development and behavior frequently span the traditional areas of child neurology child psychiatry and general pediatrics As a result there has been some confusion in demarcating professional responsibilities in diagnosis and management as well as poorly defined terminology and classification schemas With the birth of developmental pediatrics as a pediatric specialty a more cohesive fund of knowledge has been accumulated and more meaningful strategies have beendesigned for prevention diagnosis and management

Pollak,2012-12-06 In 1972 Dr Margaret Pollak published her book Today s Three Year Oids in London This was a sensitive study of family life and the social environment of a large number of London children together with an account of their developmental assessment by various test methods She showed that variations of developmental performances were more closely related to the quality of family life than to social and economic factors Dr Pollak has now re investigated the same children at nine years of age and this book is a record of her findings The differences in development which were noted at three years of age remain in the older children Those children who at three years of age were underachievers particularly in verbal and adaptive abilities are the children who at nine years can still be identified by lower achieve ment at school These results must be of important relevance to educationalists and all concerned with the psychologists as well as to paediatricians welfare of children We must all be disturbed by the failure of any children in our urban city centres to benefit from education and our anxieties must be heightened if amongst the underachievers there are particular groups who can be identified by their ethnic identities In Britain education in school occupies a relatively small part of a child s life Dr Pollak has identified some of the factors in a child s wider experience and especially in the total home environment which are associated with the persistence of inferior performance
