A Note On One Hundred Years of Racecars

The racecar came clattering into the twentieth century as simple as could be—an engine, a chassis, and wheels. At first drivers drove with mechanics at their sides, over roads of rock and gravel, bouncing and shaking every inch of the way.

Neither roads nor cars stayed simple for long.

Soon drivers were racing on oval courses that were paved with bricks or boards. Racers sped through the old city of Monte Carlo, down narrow streets and around hairpin curves. Road races followed long loops through the countryside. Endurance races kept drivers driving through light and dark, from one afternoon to the next.

Until the late 1960s the color of a car often (but not always) told what country the car came from: green cars were British, blue cars were French, gray cars were German, red cars were Italian, and blue-and-white cars were from the United States. Then companies began paying to place their own colors and advertisements on cars. American stock cars became bright jumbles of color, rolling billboards.

Different kinds of cars were built for different kinds of races. The machines became sturdier, faster, and more streamlined. They changed so much that a modern Formula 1 racecar hardly seems related to a simple racecar from one hundred years ago. With its airfoils and sleek looks the twenty-first-century machine resembles a jet fighter as much as it does a racecar. But the racecars of each time remain wonderful mechanical sculptures, sculptures on wheels, embodying the appeal and promise of speed.
