Safe Blood:

Safe Blood Joseph Feldschuh, 2010-05-11 Thousands of hemophiliac children have contracted hepatitis and aids from transfusion with infected blood Ninety five percent of all Americans will need transfusions at some point in their lives yet it has taken the terrifying emergence of AIDS to alert an unsuspecting public to the actual risks involved Dr Feldschuh documents the inadequacies and shocking oversights of the blood bank system elucidating the risks of present practices and suggesting specific alternatives including the now feasible storing of one's own blood pedigreed donors and mono donor transfusion

Safe Blood and Blood Products World Health Organization, 2002 Ensuring the safety of blood for transfusion is a key prevention strategy in the fight against HIV AIDS These learning materials have been designed specifically for use in distance learning programmes in blood safety The modules have been designed for staff responsible for donor recruitment blood collection and the processing and issue of blood for transfusion They are written in an interactive practical style with learning objectives activities self assessment questions progress checks and action plans Most of the training is designed to take place at the workplace in the context of the performance of daily work This pack consists of a set of four spiral bound modules and a Trainer's Guide all supplied in a plastic wallet *Making Safe Blood Available in Africa* United States. Guidance on ensuring a sufficient supply of safe blood and blood components during emergencies World Health Organization, 2023-04-14 This guidance document has been produced by the World Health Organization WHO to assist blood services in the development of national plans to respond to any disaster major incident or emergency that threatens sufficiency or safety of the blood supply Such situations can be caused by natural forces by factors influenced by humans or directly caused by humans This document is intended to guide the national blood service through the process of planning how to respond in a timely controlled and appropriate way to emergencies In the preparation of the document WHO has tried to include the elements that blood services or providers might need to consider providing some background on the reasons for their inclusion and guidance on different response options that may be available The consequences of an emergency may include interruption of blood supply due to a shortage of blood donors or to a disrupted supply of critical materials and equipment used in blood collection component preparation and laboratory testing resulting in reduced availability of blood and blood components Although the demand for transfusion may decrease in some situations transfusions continue to be necessary for clinical emergencies and for those patients reliant on long term transfusion support In contrast some emergencies for instance those resulting in multiple casualties could lead to a rapid surge in demand for blood over a short time The challenge is to maintain essential transfusion services as well as responding to the emergency Preparedness including business continuity planning is essential for blood services to mitigate the impact of emergencies Preparation should be underpinned by locally sensitive risk assessment using relevant data at the local or country level

However it is not possible to predict the nature of every situation that could impact on the blood supply and it is therefore expected that blood services will review the elements in this document as well as assessing their own situation needs capabilities and resources along with any additional relevant country specific factors in the development of their own response plans Planning should consider the concurrence and combinations of events and the response should be proportionate and coordinated with others The aim is to maintain critical services and prepare for recovery Staff training and support is key to resilience It is acknowledged that as well as affecting the sufficiency and safety of blood supply major incidents in countries undertaking transplantation may threaten the safety and sufficiency of the supply of other products of human origin such as cells tissues and organs Increasingly blood services are taking overall national responsibility for transplantation in their capacity as the organization responsible for the collection processing storage and supply of cells tissues and organs This approach is both sensible and appropriate as the overall donor selection and screening processes are the same or very similar This guidance document can therefore also be used to assist those bodies responsible for the provision of cells tissues and organs to prepare for emergencies Resilience to disasters and emergencies requires a commitment to the blood supply and transfusion system as an integral part of the health care system Global status report on blood safety and availability 2021 World Health Organization,2022-06-30 *Blood supply FDA oversight and remaining issues of safety : report to the ranking minority member, Committee on Commerce, House of Representatives.* United States.
