Comparative Analysis of Technological and Intelligent Terrorism Impacts on Complex Technical Systems N.A. Makhutov,G.B. Baecher,2013-01-10 Insider knowledge about a complex technical system coupled with access to its elements has the potential to be used for triggering the most disastrous of terrorist attacks Technological terrorism is the unauthorized impact on a complex technical system with the intention of breaking down its protection and initiating secondary catastrophic processes to cause damage and loss outside the facility Intelligent terrorism on the other hand is the unauthorized purposeful interference in the processes of design construction or maintenance of a complex technical system and is either aimed at increasing existing vulnerabilities or creating new ones This book is based on the NATO Advanced Research Workshop ARW on Comparative Analysis of Technological and Intelligence Terrorism Impacts on Complex Technical Systems It lays the foundation for a risk informed approach to modeling analyzing managing and controlling complex technical systems in the face of terrorist attacks To formulate such an approach it is necessary to combine the insights of a spectrum of disciplines across engineering human and social sciences and economics The book explains how an understanding of the vulnerabilities of complex technical systems to terrorist attack can reduce these vulnerabilities and contain or limit the impact of terrorism and also the way in which such an understanding is crucial to the development of a set of design criteria and codes which will take such vulnerabilities into account The book also identifies areas of further research and opportunities for future exchange and collaboration

Kayser,2006-04-11 Launch activities performed by private entities deal with a complex legal environment The Space Treaties provide a general liability framework Launch participants are subject to regulatory or institutional control and to domestic liability laws Specific contractual practice has developed due to insurance limitations the inter participants waivers of liability and claims This book synthesizes information on the norms of play to allow the grasp

of their relative weight and interactions in the assessment of liability risk for launch activities It reveals a legal framework presently lacking sufficient predictability for an efficient liability risk management the waivers of liability suffer weaknesses as do all such clauses and lack uniformity and reliability and the Space Treaties contain ambiguous terms preventing predictable determination of the States responsible for authorizing and supervising launch activities and for damage compensation and do not reflect the liability of launch operators This book offers suggestions of new approaches for harmonizing waivers of liability to improve their consistency validity and flow down and improving the Space Treaties for their implementation to non governmental launch activities In the launch community the need for lawmaking is less compelling than in fields such as aviation Nevertheless adjustments to the present framework are proposed through model clauses and an international instrument for further thinking and contribution by those sharing the opinion that creative lawmaking is needed now to prepare for tomorrow s endeavors      *Publications* North Carolina.
