Santa's roots to Saint Nicholas and it's widely accepted that Coke manufactured the contemporary image of Santa embraced by the world today. On both counts they are only partially correct because in reality Santa is a colorful amalgamation of different figures who appear in various countries' folk stories across a wide range of centuries. For starters, despite centuries of unabashed whitewashing, science has confirmed that Saint Nicholas as his birthplace should suggest was not white nor was he excessively overweight. In the early 2000s, teams of researchers acquired copies of x-rays and logs of measurements originally compiled by scientists of Nicholas's skull in 1950 in the hopes of examining its framework in further detail. In 2004, a facial anthropologist at the University of Manchester, Dr. Caroline Wilkinson, succeeded in producing a forensically reconstructed 3D model of Nicholas's face; the reconstruction was refined in 2014. In both reconstructions, which captured Nicholas around the time of his death, his skin is olive-toned. It seems that he did sport a full beard, but it was untamed, scraggly, and silvery. He was balding and had benign but forgettable features with slightly protruding ears, brown eyes, the shape of almonds, and small sunken cheeks. And whereas Santa is to most young ones deceptively tremendous in both height and girth, more so when pictured with his tiny elves, Nicholas was roughly 5'6". Then there are the scientists who insist that he was shorter and that his height was considerably below average at just about 5'0".
