Philosophy of Language and Webs of Information Heimir Geirsson, 2013 The nature of propositions and the cognitive value of names have been the focal point of philosophy of language for the last few decades The advocates of the causal reference theory have favored the view that the semantic contents of proper names are their referents However Frege's puzzle about the different cognitive value of coreferential names has made this identification seem impossible Geirsson provides a detailed overview of the debate to date and then develops a novel account that explains our reluctance even when we know about the relevant identity to substitute coreferential names in both simple sentences and belief contexts while nevertheless accepting the view that the semantic content of names is their referents The account focuses on subjects organizing information in webs a name can then access and elicit information from a given web Geirsson proceeds to extend the account of information to non-referring names but they have long provided a serious challenge to the causal reference theorist

Victorian children as literary collaborators but also interrogates how those creative partnerships reflect and influence adult child relationships in the world beyond books *Between Generations* breaks the critical impasse that understands children's literature and children themselves as products of adult desire and revises common constructions of childhood that frequently and often errantly resign the young to passivity or powerlessness **Report of the Industrial Commission on Agriculture and Agricultural Labor** United States.
