Saltmarsh Ecology:

Saltmarsh Ecology Paul Adam, 1993-07-08 A broad introduction to the ecology of the unique environment of the saltmarsh

Australian Saltmarsh Ecology Neil Saintilan, 2009 Australian Saltmarsh Ecology presents the first comprehensive review of the ecology and management of Australian saltmarshes. The past 10 years in particular have seen a sustained research effort into this previously poorly understood and neglected resource. In ten chapters contributed by experts in each discipline, the book outlines what is known of the biogeography and geomorphology of Australian saltmarshes, their fish and invertebrate ecology, the use of Australian saltmarshes by birds and insectivorous bats, and the particular challenges of management including the control of mosquito pests and the issue of sea level rise. It provides a powerful argument that coastal saltmarsh is a unique and critical habitat vulnerable to the combined impacts of coastal development and sea level rise.

Ecology of Dunes, Salt Marsh and Shingle J.R. Packham, A. J. Willis, 1997-09-30 Summary Discusses coastal sand dune shingle beach and salt marsh ecosystems communities based upon relatively unconsolidated granular deposits which frequently rest upon solid rock or much more rarely on peat.

Saltmarsh Conservation, Management and Restoration J. P. Doody, 2008 This book series looks at each of the main coastal habitats: salt marshes, sand dunes, and sand shingle shores, modified coastal grazing marshes, salinas, and sea cliffs in turn. Each habitat is described in relation to its natural development and the way this has been influenced by human actions. The different states in which the habitats exist are reviewed against the pressures exerted upon them. Options for management are considered and the likely consequences of taking a particular course of action are highlighted.

Concepts and Controversies in Tidal Marsh Ecology M.P. Weinstein, Daniel A. Kreeger, 2000-10-31 Tidal salt marshes are viewed as critical habitats for the production of fish and shellfish. As a result, considerable legislation has been promulgated to conserve and protect these habitats, and much of it is in effect today. The relatively young science of ecological engineering has also emerged, and there are now attempts to reverse centuries-old losses by encouraging sound wetland restoration practices. Today, tens of thousands of hectares of degraded or isolated coastal wetlands are being restored worldwide. Whether restored wetlands reach functional equivalency to natural systems is a subject of heated debate. Equally debatable is the paradigm that depicts tidal salt marshes as the great engine that drives much of the secondary production in coastal waters. This view was questioned in the early 1980s by investigators who noted that total carbon export on the order of 100 to 200 g m⁻² y⁻¹ was of much lower magnitude than originally thought. These authors also recognized that some marshes were either net importers of carbon or showed no net exchange. Thus, the notion of outwelling has become but a single element in an evolving view of marsh function and the link between primary and secondary production. The revisionist movement was launched in 1979 when stable isotopic ratios of macrophytes and animal tissues were found to be mismatched. Some eighteen years later, the view of marsh function is still undergoing additional modification, and we are slowly unraveling the

complexities of biogeochemical cycles nutrient exchange and the links between primary producers and the marsh estuary fauna Yet since Teal s seminal paper nearly forty years ago we are not much closer to understanding how marshes work If anything we have learned that the story is far more complicated than originally thought Despite more than four decades of intense research we do not yet know how salt marshes function as essential habitat nor do we know the relative contributions to secondary production both in situ or in the open waters of the estuary The theme of this Symposium was to review the status of salt marsh research and revisit the existing paradigm s for salt marsh function Challenge questions were designed to meet the controversy head on Do marshes support the production of marine transient species If so how Are any of these species marsh obligates How much of the production takes place in situ versus in open waters of the estuary coastal zone Sessions were devoted to reviews of landmark studies or current findings that advance our knowledge of salt marsh function A day was also devoted to ecological engineering and wetland restoration papers addressing state of the art methodology and specific case histories Several challenge papers arguing for and against our ability to restore functional salt marshes led off each session This volume is intended to serve as a synthesis of our current understanding of the ecological role of salt marshes and will it is hoped pave the way for a new generation of research

Saltmarsh Ecology Stephen Patrick Long,C. F. Mason,1983 *Library of Congress Subject Headings* Library of Congress,2012 Coastal Conservation and Management J. Pat Doody,2012-12-06 Coastal Conservation and Management provides the reader with a synthesis of the range and variation of the main coastal formations and includes practical guidance on their management The book discusses all the main coastal habitats of importance for nature conservation saltmarsh shingle sand dune and seacliff as well as combinations of these habitats estuaries and other coastal wetlands It offers a comprehensive picture of both the soft sedimentary formations and those which are more resilient While these habitats have all been covered elsewhere in the literature no single volume gives such a wide ranging account An attempt is made throughout to provide the reader with a basic understanding of the importance and range of variation of each habitat and coastal ecosystem The principal issues are discussed and the key management options identified Some prescriptive suggestions are made though for the most part the reader is left to ponder the issues and their possible solutions
