Skov, P. Anders Nilsson, 2018-01-09 This book sets out to bridge the order scales among pike researchers populations communities management and fisheries It emphasizes the progress of pike research during the last two decades during which the order bridging approach emerged This framework underpins the text and the message to convey its importance to pike research and to fish research in general In addition a considerable part of the book is devoted to management implications and highlights aspects of human dimensions in recreational fisheries Science of Lakes, 2024-01-17 Lakes are

among the most extensive freshwater aquatic ecosystems in the world Their evolution results from the interactions of numerous natural and anthropogenic factors This book includes 12 chapters and presents case studies on the impacts of changes and tectonic movements on the evolution of lake water levels Section 1 the interactions between anthropogenic activities and the physicochemical characteristics of lakes Section 2 and the limnological characteristics and their interactions with other components of the environment Section 3 **Ecological Restoration of Aquatic and**

Semi-Aquatic Ecosystems in the Netherlands (NW Europe) P.H. Nienhuis, Ramesh D. Gulati, 2013-03-14 This work presents the state of the art of aquatic and semi aquatic ecological restoration projects in The Netherlands Starting from the conceptual basis of restoration ecology the successes and failures of hundreds of restoration projects are described

Numerous successful projects are mentioned In general ecological restoration endeavours greatly benefit from the progressive experience achieved in the course of the years Failures mainly occur through insufficient application of physical chemical or ecological principles Spontaneous colonization by plants and animals following habitat reconstruction is preferred However sometimes the re introduction of keystone species e g eelgrass salmon beaver is necessary in case the potential habitats are isolated or fragmented or if a seed bank is lacking thus not allowing viable populations to develop Re introducing traditional management techniques e g mowing without fertilization low intensity grazing is important to rehabilitate the semi natural and cultural landscapes that are so characteristic for The Netherlands
