with energy spaces as well as the many dimensional structure in which these stable shapes of any size are defined as identified by D Coxeter are patterns which can be used to form a new context for physical description This is what this book is about forming such a new context wherein the stable many but few body spectral system is formulated and accurately described ie it is solved In such a new context partial differential equations come to play a subordinate role to stable shapes and their relation to defining a finite stable spectral set which is a property of the new many dimensional containment set a property which determines which stable patterns can exist But there are many social forces which oppose such a discussion These opposing social forces are also discussed t
