Shape Of Red Insideroutsider Reflections:

The Shape of Red Ruth Hubbard, Margaret Randall, 1988 **I Never Left Home** Margaret Randall, 2020-03-13 In 1969 poet and revolutionary Margaret Randall was forced underground when the Mexican government cracked down on all those who took part in the 1968 student movement. Needing to leave the country, she sent her four young children alone to Cuba while she scrambled to find safe passage out of Mexico. In *I Never Left Home*, Randall recounts her harrowing escape and the other extraordinary stories from her life and career. From living among New York's abstract expressionists in the mid 1950s as a young woman to working in the Nicaraguan Ministry of Culture to instill revolutionary values in the media during the Sandinista movement, the story of Randall's life reads like a Hollywood production. Along the way, she edited a bilingual literary journal in Mexico City, befriended Cuban revolutionaries, raised a family, came out as a lesbian, taught college, and wrote over 150 books. Throughout it all, Randall never wavered from her devotion to social justice. When she returned to the United States in 1984 after living in Latin America for twenty-three years, the U.S. Immigration and Naturalization Service ordered her to be deported for her subversive writing. Over the next five years and with the support of writers, entertainers, and ordinary people across the country, Randall fought to regain her citizenship, which she won in court in 1989. As much as *I Never Left Home* is Randall's story, it is also the story of the communities of artists, writers, and radicals she belonged to. Randall brings to life scores of creative and courageous people on the front lines of creating a more just world. She also weaves political and social analyses and poetry into the narrative of her life. Moving, captivating, and astonishing, *I Never Left Home* is a remarkable story of a remarkable woman.

[Letters from the Edge](#) Margaret Randall, 2025-04 By excerpting from letters she exchanged with five irreverent writers and artists, Margaret Randall constructs conversations that open windows on four pivotal moments in her life and on world events. This correspondence touches on important themes such as social change, identity, art, and creative integrity—issues that were relevant then and remain so today. The letters are sometimes philosophical, sometimes intimate, and deal with family life as well as major creative projects, including literary, political, publishing, often taken on against daunting odds. Society continuously tries to subsume or shape influential rebel minds to its interests. Every generation has those who will not allow themselves to be silenced or controlled. This book is exciting evidence of this.

Killer Instinct Nadine Weidman, 2021-10-19 A historian of science examines key public debates about the fundamental nature of humans to ask why a polarized discourse about nature versus nurture became so entrenched in the popular sciences of animal and human behavior. Are humans innately aggressive or innately cooperative? In the 1960s, bestselling books enthralled American readers with the startling claim that humans possessed an instinct for violence inherited from primate ancestors. Critics responded that humans were inherently loving and altruistic. The resulting debate

fiercely contested and highly public left a lasting impression on the popular science discourse surrounding what it means to be human. Killer Instinct traces how Konrad Lorenz, Robert Ardrey and their followers drew on the sciences of animal behavior and paleoanthropology to argue that the aggression instinct drove human evolutionary progress. Their message spread throughout popular media, brought pointed ripostes. Led by the anthropologist Ashley Montagu, opponents presented a rival vision of human nature equally based in biological evidence that humans possessed inborn drives toward love and cooperation. Over the course of the debate, however, each side accused the other of holding an extremist position that behavior was either determined entirely by genes or shaped solely by environment. Nadine Weidman shows that what started as a dispute over the innate tendencies of animals and humans transformed into an opposition between nature and nurture. This polarized formulation proved powerful. When E. O. Wilson introduced his sociobiology in 1975, he tried to rise above the oppositional terms of the aggression debate. But the controversy over Wilson's work, led by critics like the feminist biologist Ruth Hubbard, was ultimately absorbed back into the nature versus nurture formulation. Killer Instinct explores what happens and what gets lost when polemics dominate discussions of the science of human nature. **The Shape of Red** Ruth

Hubbard, Margaret Randall, 1988, **Management Learning** John Burgoyne, Michael Reynolds, 1997-10-15. Management Learning introduces the context and history of management learning and offers a critical framework within which the key debates can be understood. The book also provides an incisive discussion of the values and purpose inherent in the practice and theory of management learning and charts the diverse external factors influencing and directing the processes of learning. The volume concludes with a look forward towards the future reconstruction of the field. *Walking to the Edge* Margaret Randall, 1991. Insightfully links the impact of U.S. foreign policy on the people of Latin America, the female voice in art and literature and the need to break the silence around incest and other abuse. **Boundary Objects and Beyond** Geoffrey C. Bowker, Stefan Timmermans, Adele E. Clarke, Ellen Balka, 2016-02-26. The multifaceted work of the late Susan Leigh Star is explored through a selection of her writings and essays by friends and colleagues. Susan Leigh Star, 1954-2010, was one of the most influential science studies scholars of the last several decades. In her work, Star highlighted the messy practices of discovering science, asking hard questions about the marginalizing as well as the liberating powers of science and technology. In the landmark work *Sorting Things Out*, Star and Geoffrey Bowker revealed the social and ethical histories that are deeply embedded in classification systems. Star's most celebrated concept was the notion of boundary objects: representational forms, things or theories that can be shared between different communities, each holding its own understanding of the representation. Unfortunately, Leigh was unable to complete a work on the poetics of infrastructure that further developed the full range of her work. This volume collects articles by Star that set out some of her thinking on boundary objects, marginality and infrastructure, together with essays by friends and colleagues from a range of disciplines, from philosophy of science to organization science, that testify to the wide-ranging influence of Star's work. Is our nature as individuals as a species determined by our evolution and encoded in our genes If we unravel the protein sequences of our DNA will we gain the power to cure all of our physiological and psychological afflictions and even to solve the problems of our society Today biologists especially geneticists are proposing answers to questions that have long been asked by philosophy or faith or the social sciences Their work carries the weight of scientific authority and attracts widespread public attention but it is often based on what the renowned evolutionary biologist Richard Lewontin identifies as a highly reductive misconception the pervasive error that confuses the genetic state of an organism with its total physical and psychic nature as a human being In these nine essays covering the history of modern biology from Darwin to Dolly the sheep all of which were originally published in The New York Review of Books Lewontin combines sharp criticisms of overreaching scientific claims with lucid expositions of the exact state of current scientific knowledge not only what we do know but what we don't and maybe won't anytime soon Among the subjects he discusses are heredity and natural selection evolutionary psychology and altruism nineteenth century naturalist novels sex surveys cloning and the Human Genome Project In each case he casts an ever vigilant and deflationary eye on the temptation to look to biology for explanations of everything we want to know about our physical mental and social lives These essays several of them updated with epilogues that take account of scientific developments since they were first written are an indispensable guide to the most controversial issues in the life sciences today The second edition of this collection includes new essays on genetically modified food and the completion of the Human Genome Project It is an indispensable guide to the most controversial issues in the life sciences today
