Shaping Of Cambridge Botany:

The Shaping of Cambridge Botany Stuart Max Walters, 1981 [The Shaping of Cambridge Botany](#) Stuart Max Walters, 1981 **Nature Displaced, Nature Displayed** Nuala C. Johnson, 2011-04-29 Botanical gardens brought together in a single space the great diversity of the earth's flora. They displaced nature from forest and foothill and rearranged it to reveal something of the scientific principles underpinning the apparent chaos of the wild. *Nature Displaced, Nature Displayed* shows how the design and display of such gardens was not determined by scientific principles alone. Through a study of three botanical gardens belonging to the University of Cambridge, the Royal Dublin Society and the Belfast Natural History Society, the author shows how the final outcome involved a complex interplay of ideas about place, identity, empire, botanical science and especially aesthetics, creating spaces that would educate the mind as well as please the senses. This highly engaging book offers a wealth of fresh insights into both the history and development of botanical gardens as well as connections between science and aesthetics. *Dictionary Of British And Irish Botanists And Horticulturalists Including plant collectors, flower painters and garden designers* Ray Desmond, 2002-09-11 An exhaustive treatment of all British and Irish botanists through 1976. **Reader's Guide to British History** David Loades, 2020-12-17 The Reader's Guide to British History is the essential source to secondary material on British history. This resource contains over 1,000 A-Z entries on the history of Britain from ancient and Roman Britain to the present day. Each entry lists 6-12 of the best known books on the subject, then discusses those works in an essay of 800 to 1,000 words prepared by an expert in the field. The essays provide advice on the range and depth of coverage as well as the emphasis and point of view espoused in each publication. *The Beauty of the Flower* Stephen A. Harris, 2023-08-25 Blooming with rare archival images, the story of scientific botanical illustrations over nearly seven hundred years. In a world flooded with images designed to create memories, validate perceptions and influence others, botanical illustration is about something much more focused: creating technically accurate depictions of plants. Reproductions of centuries-old botanical illustrations frequently adorn greeting cards, pottery and advertising to promote heritage or generate income, yet their art is scientific, intended to record, display and transmit scientific data. *The Beauty of the Flower* tells the backstory of these images, showing us how scientific botanical illustrations are collaborations among artists, scientists and publishers. It explores the evolution and interchanges of these illustrations since the mid-fifteenth century, how they have been used to communicate scientific ideas about plants and how views of botanical imagery change. Featuring unique images rarely seen outside of specialist literature, this book reveals the fascinating stories behind these remarkable illustrations. *Reader's Guide to the History of Science* Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals, Einstein, institutions and disciplines, Mathematics, general themes, Romantic Science and central concepts, Paradigm and Fact. The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of

200 contributors are drawn Dictionary Of British And Irish Botanists And Horticulturists Including plant collectors, flower painters and garden designers Ray Desmond,1994-02-25 Over the past four centuries botanists and gardeners in the British Isles have gathered maintained and propagated many varying species of plants Their work has been documented in innumerable books and articles which are often difficult to trace The Dictionary of British and Irish Botanists and Horticulturalists represents a time saving reference source for those who wish to discover more about the lives and achievements of the horticulturalists listed The dictionary s utility comes not only from indicating the major publications of the named authors but also the location of their herbaria and manuscripts The previous 1977 edition of the Dictionary has for many years been a much used source of information for botanists botanic artists and archivists In this revised edition the scope has been expanded to include among its 13 000 entries flower painters in addition to botanical artists over 1400 entries and for the first time garden designers Finally the Dictionary should have international appeal since so many botanists and gardeners worked on collective plants overseas in particular in North America and the British Commonwealth Each entry gives wherever possible details of dates and places of birth and death educational qualifications professional posts honours and awards publications location of plant collections manuscripts drawings and portraits Its main function however is to provide further biographical references to books and periodicals Comprehensive classified indices facilitate access by professions and activities countries and plant interests

Confronting Contagion Melvin Santer,2014-09-02 Throughout history humankind s working theories regarding the cause of infectious disease have shifted drastically as cultures developed their philosophic religious and scientific beliefs Plagues that were originally attributed to the wrath of the gods were later described as having nothing to do with the gods though the cause continued to be a mystery As centuries passed medical and religious theorists proposed reasons such as poor air quality or the configuration of the planets as causes for the spread of disease In every instance in order to understand the origin of a disease theory during a specific period of history one must understand that culture s metaphysical beliefs In *Confronting Contagion* Melvin Santer traces a history of disease theory all the way from Classical antiquity to our modern understanding of viruses Chapters focus on people and places like the Pre Socratic Philosophers Galen and the emergence of Christianity in Rome the Black Death in fourteenth century Europe cholera and puerperal sepsis in the nineteenth century and other periods during which our understanding of the cause of disease was transformed The cause of contagious disease was demonstrated to be a general biological phenomenon there are contagious diseases of plants animals and bacteria with causes identical to causes of human diseases These issues are uniquely included in this book In each case Santer identifies the key thinkers who helped form the working disease theories of the time The book features many excerpts from primary sources from the Hippocratic Corpus to the writings of twentieth century virologists creating an authentic synthesis of the Western world s intellectual and religious attitude toward disease throughout history

Ecology and Enclosure Shirley Wittering,2013-02-07 South Cambridgeshire

has some of the richest arable land in England and has been cultivated for millennia By the turn of the nineteenth century industrialisation and massive population growth had resulted in an enormous increase in the demand for food which in turn led to enclosure But this desire to plough every available piece of land resulted in the destruction of many valuable and distinctive habitats that had existed for centuries The Ecology of Enclosure breaks new ground in comparing the effect of Parliamentary Enclosure with the findings of the enthusiastic Botanisers from Cambridge this reveals not only the effect of enclosure on the ecology of the land but also on the people whose link with the land was broken The first section presents a study of social and agricultural life before enclosure describing geology and climate the fold course open field system of farming and the strict stinting rules which governed how land could be used for grazing and stock movement and the crop rotation systems employed The second part describes the process of enclosure including opposition to it the changes that occurred to the landscape and within village communities as work in industry gradually replaced rural occupations the effects of fencing on movement and of the loss of common land to the plough The third section is an analysis of the new study of Botany which the University of Cambridge was enjoying in the eighteenth and nineteenth centuries based on their own records and a review of some of the specific effects on the flora and fauna of the area
