Shark Issue :

The Shark Attack Files Jeff Klinkenberg, University of Florida, 2016-11-14 The University of Florida has an ambitious goal to harness the power of its faculty staff students and alumni to solve some of society's most pressing problems and to become a resource for the state of Florida the nation and the world In 1958 a panel funded by the Office of Naval Research initiated the formation of the International Shark Attack File the first comprehensive documentation of shark attacks on a global and historical level In 1988 the file was transferred to the Florida Museum of Natural History at the University of Florida It is part of the Florida Program for Shark Research directed by George H Burgess the planet's expert on shark attacks and staffed by a world renowned team of research scientists and educators Travel the globe with Burgess the Sherlock Holmes of shark attacks as he studies mauled remains and the scars of the lucky survivors His most famous case took him to an idyllic Red Sea resort where panic had set in after five attacks occurred in a single week The attacks were carried out by Oceanic White Tips and a Mako deep water species that had no business being so close to the beach Following the clues dive boat operators feeding sharks by hand to entertain tourists the disappearance of the yearly tuna catch and the dead sheep New Zealand cargo companies had been tossing overboard Burgess solves the mystery of the shark attacks for Egyptian tourism officials and offers a list of best practices But not all cases end with an easy prescription In St Petersburg Beach Florida he visits a recent shark attack victim bitten just off her dock on Boca Ciega Bay While the victim would prefer to forget the fateful day the sharp toothed jaws of the Bull Shark latched onto her leg just below the knee Burgess gently coaxes the story from her It will go in the file to educate other shark researchers and educators and help us better understand the world's most feared predator The stories chronicled in *Gatorbytes* span all colleges and units across the UF campus They detail the far reaching impact of UF's research technologies and innovations and the UF faculty members dedicated to them *Gatorbytes* describe how UF is continuing to build on its strengths and extend the reach of its efforts so that it can help even more people in even more places

Shark Trouble Peter Benchley, 2002-06-04 Drawing on more than three decades of experience writing about sharks and other marine animals the bestselling author of *Jaws* combines high adventure with practical information in a book that is at once a thriller and a valuable guide to being safe in on under and around the sea Shark attacks on human beings generate a tremendous amount of media coverage Benchley writes partly because they occur so rarely but mostly I think because people are and always have been simultaneously intrigued and terrified by sharks Sharks come from a wing of the dark castle where our nightmares live deep water beyond our sight and understanding and so they stimulate our fears and fantasies and imaginations Benchley describes the many types of sharks including the ones that pose a genuine threat to man what is and isn't known about shark behavior the odds against an attack and how to reduce them even further all reinforced with the lessons he has learned the mistakes he has made and the personal perils he has encountered while producing television documentaries bestselling novels and articles about the sea and its inhabitants He

tells how to swim safely in the ocean how to read the tides and currents what behavior to avoid and how to survive when danger suddenly strikes He discusses how to tell children about sharks and the sea and how to develop in young and old alike a healthy respect for the ocean As Benchley says The ocean is the only alien and potentially hostile environment on the planet into which we tend to venture without thinking about the animals that live there how they behave how they support themselves and how they perceive us I know of no one who would set off into the jungles of Malaysia armed only with a bathing suit a tube of suntan cream and a book and yet that s precisely how we approach the oceans No longer Not after you ve read Shark Trouble

Shark Attacks Blake Chapman,2017-11 Humans spend more time in or on the water than ever before We love the beach But for many people getting in the water provokes a moment s hesitation Shark attacks are big news events and although the risk of shark attack on humans is incredibly low the fact remains that human lives are lost to sharks every year Shark Attacks explores the tension between risk to humans and the need to conserve sharks and protect the important ecological roles they play in our marine environments Marine biologist Blake Chapman presents scientific information about shark biology movement patterns and feeding behaviour She discusses the role of fear in the way we think about sharks and the influence of the media on public perceptions Moving first hand accounts describe the deep and polarising psychological impacts of shark attacks from a range of perspectives This book is an education in thinking through these emotive events and will help readers to navigate the controversial issues around mitigating shark attacks while conserving the sharks themselves

Shark Mark Carwardine,2004 A richly illustrated reference Sharks are awe inspiring beautiful mysterious and frightening However perceived they never fail to excite and impress They predate the dinosaurs and have ruled the seas for 400 million years Shark presents the facts and explores the fallacies about these nearly perfectly adapted fish from their prehistoric beginning to their struggle for survival today The book covers Their origins and ancestors Diversity of the species Shark behavior and physiology Research projects Face to face encounters Conservation efforts A detailed chapter on shark attacks explains where when and why attacks occur The book also describes the different types of attacks hit and run bump and bite and sneak attacks and provides useful tips for not becoming a statistic Engagingly written and illustrated with stunning photographs Shark combines the latest scientific findings and celebrates the mystery and diversity of a remarkable species

Killers in the Water - The New Super Sharks Terrorising The World's Oceans Sue Blackhall,2012-07-27 Sharks are intriguing and beautiful creatures but they can also be deadly As we humans have explored the world s oceans and exploited them for tourism and recreation we have found ourselves coming into contact with more and more sharks And the outcome can be fatal From the Seychelles to South Africa and Australia to North America tourists divers and surfers have seemingly found themselves under increased threat from unprovoked shark attacks Fatal attacks have occurred in locations that were previously thought to be safe and in late 2010 the Egyptian resort of Sharm el Sheikh was rocked by an incredible five shark attacks in a matter of weeks But are sharks really ruthless vicious killers or are

they simply reacting to humans invading their habitat Has the number of shark attacks increased in recent years What can be done to prevent shark attacks All these questions and more are answered in this fascinating book *"This shark, swallow you whole"* Kathy Merlock Jackson, Philip L. Simpson, 2023-03-09 One of the most influential thrillers in media history Jaws first surfaced as a best selling novel by first time novelist Peter Benchley in 1974 followed by the 1975 feature film directed by Steven Spielberg at the beginning of his storied career Jaws is often considered the first blockbuster and successive generations of filmmakers have cited it as formative in their own creative development For nearly 50 years critics and scholars have studied how and why this seemingly straightforward thriller holds such mass appeal This book of original essays assembles a range of critical thought on the impact and legacy of the film employing new perspectives historical cinematic literary scientific and environmental while building on the insights of previous writers While varying in focus the essays in this volume all explore why Jaws was so successful in its time and how it remains a prominent storytelling influence well into the 21st century **Shark** Richard Ellis, 2012-04-17 The sharks ancient or modern real or imaginary have always been with us and will probably remain with us forever They appear not only in movies and literature but in countless permutations of size shape and materials permeating our daily lives with their silent menace In a sense humans live in a world replete with sharks not vice versa Thus Richard Ellis sets about chronicling and debunking the myths of sharks throughout history From 18th century art to the phenomena of JAWS the shark has remained the indomitable aggressor of the deep the last demon of humankind The image of the shark and the fear it inspires infiltrates our daily lives with its mythical power and strength But it is not man who should fear the shark Our need to dominate these predators is destroying them and their habitat Through hundreds of full color images Ellis proves the necessity of preserving these majestic creatures As curator of the Ft Lauderdale Museum of Art s exhibition entitled Shark debuting May 2012 Ellis adeptly turns these sleek efficient hunters from monsters of the deep into rare beautiful forces of nature [Sharks: A History of Fear in Australia](#) Callum Denness, 2019-09-24 For as long as people have lived in Australia the shark has loomed large in our fears From the Noongar people of Western Australia who stayed out of the water for fear of being taken to media hysteria about attacks and even sightings today sharks occupy the dark recesses of our national psyche unlike any other predator They challenge the very sense of ourselves as Australians a people who hug the coastline and love the freedom of the surf And the dispute between whether to kill or protect sharks cuts to the political core of our nation yet another divide between the right and the left There is no denying that shark attacks have been increasing in recent years and so have our fears Where do we go from here How worried should we be Journalist Callum Denness deep dives into the history of our relationship with sharks and circles our fear by talking to activists marine biologists politicians surfers survivors and those who ve lost loved ones Compelling and challenging this is the clearest picture yet of whether or not we can co exist with sharks Don t get back into the water until you read Sharks A History of Fear in Australia **Shark Attack** Mac McDiarmid, 2003 Shark attack The very

expression sends a shiver down the spine It conjures terrifying images of hidden menace from the undersea world of rasping teeth of injuries too horrifying to contemplate of once calm water foaming pink with blood The reality of shark attack includes all these nightmares and more Few fears in the human imagination can compare with being eaten alive by this baleful killer fish All of these things happen usually without warning to real people just like you or I But they happen very very rarely and are but a tiny part of the truth behind this mysterious and misunderstood creature Shark Attack explains the reality behind the killer facade

Sharks in the Shallows W. Clay Creswell, 2021-06-14 A detailed account of over one hundred shark related incidents on the coast of the Carolinas from a shark bite investigator Powerful and mysterious sharks inspire both fascination and fear Worldwide oceans are home to some five hundred species and of those fifty six are known to reside in or pass through the waters off the coast of both North and South Carolina At any given time waders swimmers and surfers enjoying these waters are frequently within just one hundred feet of a shark While it s unnerving to know that sharks often swim just below the surface in the shallows W Clay Creswell a shark bite investigator for the Shark Research Institute s Global Shark Attack File explains that attacks on humans are extremely rare In 2019 the International Shark Attack File confirmed sixty four unprovoked attacks on humans including three in North Carolina and one in South Carolina While acknowledging that they pose real dangers to humans Creswell believes the fear of sharks is greatly exaggerated During his sixteen year association with the Shark Research Institute he has investigated more than one hundred shark related incidents and has maintained a database of all shark human encounters along the Carolina coastlines back to 1817 Creswell uses this data to expose the truth and history of this often sensationalized topic Beyond the statistics related to attacks in the Carolina waters Sharks in the Shallows offers a history of shark human interactions and an introduction to the world of shark attacks Creswell details the conditions that increase a person s chances of an encounter profiles the three species most often involved in attacks and reveals the months and time of day with the highest probability of an encounter With a better understanding of sharks responses to their environment and what motivates them to attack humans he hopes people will develop a greater appreciation of the invaluable role sharks play in our marine environment
