Shark Attacks Blake Chapman, 2017-11-01 Humans spend more time in or on the water than ever before We love the beach But for many people getting in the water provokes a moment's hesitation Shark attacks are big news events and although the risk of shark attack on humans is incredibly low the fact remains that human lives are lost to sharks every year Shark Attacks explores the tension between risk to humans and the need to conserve sharks and protect the important ecological roles they play in our marine environments Marine biologist Blake Chapman presents scientific information about shark biology movement patterns and feeding behaviour She discusses the role of fear in the way we think about sharks and the influence of the media on public perceptions Moving first hand accounts describe the deep and polarising psychological impacts of shark attacks from a range of perspectives This book is an education in thinking through these emotive events and will help readers to navigate the controversial issues around mitigating shark attacks while conserving the sharks themselves

Herpetological Osteopathology Bruce M. Rothschild,Hans-Peter Schultze,Rodrigo Pellegrini,2012-01-04 As scientific analysis of testable hypotheses has replaced the speculative approach to study of bone disease in recent and fossil amphibians and reptiles the field has advanced from simply reporting observations to analyzing their implications This process is predicated upon a reproducible data base which explains diagnoses the nature of bony alterations and a secure review of the literature Thereby hangs the rub The herpetological literature are difficult to access let alone read and are scattered through many prominent and eclectic journals and in the lay literature While older diagnoses often have not stood the test of time the clarity of report descriptions usually allows confident identification of the underlying pathology

Sharks in the Shallows W. Clay Creswell,2021-06-14 A detailed account of over one hundred shark related incidents on the coast of the Carolinas from a shark bite investigator Powerful and mysterious sharks inspire both fascination and fear Worldwide oceans are home to some five hundred species and of those fifty six are known to reside in or pass through the waters off the coast of both North and South Carolina At any given time waders swimmers and surfers enjoying these waters are frequently within just one hundred feet of a shark While it s unnerving to know that sharks often swim just below the surface in the shallows W Clay Creswell a shark bite investigator for the Shark Research Institute s Global Shark Attack File explains that attacks on humans are extremely rare In 2019 the International Shark Attack File confirmed sixty four unprovoked attacks on humans including three in North Carolina and one in South Carolina While acknowledging that they pose real dangers to humans Creswell believes the fear of sharks is greatly exaggerated During his sixteen year association with the Shark Research Institute he has investigated more than one hundred shark related incidents and has maintained a database of all shark human encounters along the Carolina coastlines back to 1817 Creswell uses this data to expose the truth and history of this often sensationalized topic Beyond the statistics related to attacks in the Carolina waters *Sharks in the Shallows* offers a history of shark human interactions and an introduction to the world of shark attacks Creswell details

Dangerous Fishes of New Zealand Laith A. Jawad, 2024-10-22. Among the aims of the present book is to educate locals about the danger of this group of fishes as part of a public education and awareness program that should be initiated in the coastal areas. It is therefore important to identify and assess the hazards posed by various fishes in each region and bring the results to public attention. In addition, at locations where hazards involving dangerous fish have been identified, procedures should be developed for treating any injuries sustained. This book will be a reference book to both Academic and students in different disciplines of knowledge to use in their research on fishes of New Zealand and the Pacific. The scholars interested in fish fauna of New Zealand will use this book as a guide to compare the dangerous fish fauna of New Zealand with those of the other parts of The Pacific regions.

A Florida State of Mind James D. Wright, 2019-04-30. A witty history of the state that's always in the news for everything from alligator attacks to zany crimes. There's an old clip of Bugs Bunny sawing the entire state of Florida off the continent and every single time a news story springs up about some shenanigans in Florida, someone on the internet posts it in response. Why are we so ready to wave goodbye to the Sunshine State? In *A Florida State of Mind: An Unnatural History of Our Weirdest State*, James D. Wright makes the case that there are plenty of reasons to be scandalized by the land and its sometimes kooky, sometimes terrifying denizens, but there's also plenty of room for hilarity. Florida didn't just become weird; it's built that way. Uncharted swampland doesn't easily give way to sprawling suburbia. It took violent colonization, land scams to trick non-Floridians into buying undeveloped property, and the development of railroads to benefit one man's hotel empire. Even the most natural parts of Florida are unnatural: Florida citrus. Not from here, but from China. Gators. Oh, they're from Florida, all right, but that doesn't make having 1 per every 20 humans normal. Animals in the form of roadkill. Only Florida allows you to keep anything you kill on the road and anything you find. Yet everyone loves Florida: tourists come in droves and people relocate to Florida constantly; only 36% of residents were born there. Crammed with unforgettable stories and facts, Florida will show readers exactly why.
