Low Impact Forestry Forestry As If The Future Mattered:

Low Impact Forestry: Forestry as If the Future Mattered Mitch Lansky, 2002 Sustainable forestry is right where organic gardening was a generation ago at the very beginning of working out the techniques and technologies that will let logging thrive at a scale appropriate to both the human and natural communities that depend on the forest This book is at if you will pardon the expression the absolute cutting edge of that process Bill McKibben author of *The End of Nature* *Hope Human and Wild Enough* and other books If the future really mattered How would forests be managed to improve rather than degrade future timber values How would trees be cut to minimize damage to the residual forest How would foresters measure success towards minimizing damage How would loggers be paid to lower logging impacts How would forests be managed in a way that ensures the survival of all native species How would woodlot owners be able to afford this type of management Low Impact Forestry Forestry as if the Future Mattered answers these questions and more Using Maine as a case study this book offers forestry goals and guidelines that emphasize quality and value while conserving biodiversity and supporting communities for the long term

Children of the Northern Forest Jamie Sayen, 2024-01-05 This no holds barred narrative of the failure of conservation in northern New England's forests envisions a wilder more equitable lower carbon future for forest dependent communities Jamie Sayen approaches the story of northern New England's undeveloped forests from the viewpoints of the previously unheard the forest and the nonhuman species it sustains the First Peoples and in more recent times the disenfranchised human voices of the forest including those of loggers mill workers and citizens who like Henry David Thoreau wish to speak a kind word for nature From 1988 to 2016 paper companies sold their timberlands and closed seventeen paper mills in northern New England Policy makers ceded veto power to large absentee landowners who tried to preserve the status quo by demanding additional tax cuts and other subsidies for economic elites They vetoed measures designed to restore and preserve forest health at present about half of the former industrial forests are classified as degraded and the regional economy continues to be trapped in low value commodity markets This book operates as a case study of how a rural resource region can respond to a global economy responsible for climate change habitat loss and degradation and environmental injustice Sayen offers a blueprint for restoring vast wildlands and transitioning to a lower carbon high value adding local economy while protecting the natural rights of humans nonhumans and unborn generations

Forestry and Environmental Change John L. Innes, Gordon M. Hickey, H. F. Hoen, 2005 Considerable emphasis has been placed on the interactions between environmental change and forests in recent years Reports have been produced detailing scenarios of forest development associated with particular changes in climate Similarly scenarios have been produced looking at likely trends in air quality However many studies have failed to recognize that some of the biggest changes for forests are related to the socioeconomic environment rather than the physical environment This book considers the interactions between forestry and environmental climatic change from social and economic perspectives You Had a Job

Congress. Senate. Committee on Agriculture, Nutrition, and Forestry. Subcommittee on Environment, Soil Conservation, and Forestry, 1979 *Low Carbon, High Growth* Augusto de la Torre, Pablo Fajnzylber, John Nash, 2009 There is an increasing consensus in the scientific community that climate change is a real and present threat Despite the large uncertainty on the timing magnitude and even the direction of some of the physical and economic effects of this phenomenon it is widely accepted that the differences are regional and that developing countries as well as lower income populations tend to suffer the most In this context it is critical for Latin American countries to develop strategies for adapting to the various impacts of climate change and for contributing to global efforts aimed at mitigation Climate Change in Latin America contributes to these efforts by addressing a number of questions related to the causes and consequences of climate change in the case of Latin America What are the likely impacts of climate change in the region Which countries and regions will be most affected What can governments do to tackle the challenges associated with

adapting to climate change What role can Latin America play in the area of climate change mitigation While the book does not attempt to provide definitive answers to these questions it contributes new information and analysis that could help to inform the public policy debate on this important issue World Forests from Deforestation to Transition? Matti Palo, Heidi Vanhanen, 2012-12-06 This book addresses global and subnational issues concerning the world's forests societies and environment from an independent and non governmental point of view Cooperation on a global scale is not only commendable it is essential if solutions to the problems facing the world's forests are to be found To achieve this modern science needs to draw a clearer picture of relationships between forests human activity and the environment and of the consequences of environmental change for the societies development and growth There are several partly intermingled evolutionary forest transitions underway the slow transition from forest area decrease to an increase in the North while deforestation and degradation continues in the South Although not all deforestation is considered negative serious social economic and environmental costs may be associated with excessive deforestation Deforestation control is just the first step on the stony path towards sustainable forest management The forest management transition refers to the shift in the utilization towards managed semi natural secondary forests and plantation forests There are some signs in the North of the forest paradigm shift from sustainable yield to forest ecosystem concepts How deforestation can be tackled and how these concurrent transitions are effected will have profound implications for the future These processes involve several challenges with South North dimensions A search for an optimum mix of public policies and markets is a global priority both as a forest policy issue and as an inter sectoral item on the political agenda Deforestation and transition is discussed here by a team of 14 scientists from both the North and the South This book offers knowledge facts and information about world forests society and environment to help us towards equity in our use of the global forest to create a clearer vision of unassylva
