Low Density Lipoproteins:

Low Density Lipoproteins Charles Day, 2012-12-06 Low density lipoproteins LDL are pathophysiologically important because of their central role in the disease atherosclerosis and because atherosclerosis is the leading cause of death in developed countries Many researchers believe that a more detailed knowledge of the structure function and metabolism of LDL may eventually lead to a means to control atherosclerosis For this reason a fairly large research effort has gone into the investigation of LDL over the past few years The purpose of this book is to collect and summarize in one place most of the published information on LDL through 1975 To this end more than 1500 references are cited in the papers that make up this volume The A B C apolipoprotein classification system was adopted for use throughout this work In addition to the A B C and D families of apolipoproteins apoE is used to designate the arginine rich apolipoprotein This classification system is used because it is far less cumbersome than other proposed classification schemes for apolipoproteins High Density Lipoproteins, Dyslipidemia, and Coronary Heart Disease Ernst J. Schaefer, 2010-03-10 This innovative book focuses on HDL and its relationships to triglyceride rich particles It is an excellent resource for educating physicians and scientists about dyslipidemia and HDL metabolism including many exogenous substances which interact with and influence HDL

Cholesterol Metabolism, LDL, and the LDL Receptor N Myant, 2012-12-02 Cholesterol Metabolism LDL and the LDL Receptor focuses on the cholesterol biochemistry and lipoprotein metabolism This book is organized into 10 chapters that describe the coordinated actions of three regulated processes namely the intracellular synthesis of cholesterol its esterification by ACAT and the receptor mediated uptake of low density lipoprotein LDL for optimal level of free cholesterol The first five chapters explore the various aspects of cholesterol biology including discussions on the interaction of ligands with their cell surface receptors the role of coated pits in the endocytosis of receptor bound ligands and the recycling of receptors through the interior of the cell These chapters also examine the regulation of gene expression encoding inducible proteins and the use of natural and synthetic mutations in studies of the functions of the separate domains of a multifunctional protein A chapter describes the cloning of the apoB gene the receptor binding domain of apoB 100 and the unusual mode of derivation of apoB 48 Considerable chapters are devoted to LDL receptor and its pathway The concluding chapter deals with the clinical consequences of genetic dysfunction of the LDL receptor with particular emphasis on the diagnostic and treatment approaches of familial hypercholesterolemia that are based wholly or in part on knowledge of the LDL receptor or its gene This book is an indispensable guide for biologists physiologists and clinicians who are interested in the epidemiological field of cholesterol and heart attacks Cumulated Index Medicus, 1977 *Low-density Lipoprotein Interaction with Anionic Liposomes* Sheetal Rasalkar Muley, 2004 Index Medicus, 2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Oxford Textbook of Medicine** David A.
