Meaning, Expression and Thought

Wayne A. Davis, 2002-11-11 This philosophical treatise on the foundations of semantics represents a systematic effort to clarify deepen and defend the classical doctrine that words are conventional signs of mental states principally thoughts and ideas and that meaning consists in their expression This expression theory of meaning is developed by carrying out the Gricean program explaining the significance of words to have meaning in terms of speaker meaning and for a speaker to mean something in terms of intention Grice's own formulations are rejected and alternatives are developed

Nondescriptive Meaning and Reference Wayne A.

Davis, 2005-07-14 Nondescriptive Meaning and Reference extends Wayne Davis's groundbreaking work on the foundations of semantics Davis revives the classical doctrine that meaning consists in the expression of ideas and advances the expression theory by showing how it can account for standard proper names and the distinctive way their meaning determines their reference He also shows how the theory can handle interjections syncategorematic terms conventional implicatures and other cases long seen as difficult for both ideational and referential theories The expression theory is founded on the fact that thoughts are event types with a constituent structure and that thinking is a fundamental propositional attitude distinct from belief and desire Thought parts ideas or concepts are distinguished from both sensory images and conceptions Word meaning is defined recursively sentences and other complex expressions mean what they do in virtue of what thought parts their component words express and what thought structure the linguistic structure expresses and unstructured words mean what they do in living languages in virtue of evolving conventions to use them to express ideas The difficulties of descriptivism show that the ideas expressed by names are atomic or basic The reference of a name is the extension of the idea it expresses which is determined not by causal relations but by its identity or content together with the nature of objects in the world Hence a name's reference is dependent on but not identical to its meaning A name is directly and rigidly referential because the extension of the idea it expresses is not determined by the extensions of component ideas The expression theory thus has the strength of Fregeanism without its descriptivist bias and of Millianism without its referentialist or causalist shortcomings The referential properties of ideas can be set out recursively by providing a generative theory of ideas assigning extensions to atomic ideas and formulating rules whereby the semantic value of a complex idea is determined by the semantic values of its components Davis also shows how referential properties can be treated using situation semantics and possible worlds semantics The key is to drop the assumption that the values of intension functions are the referents of the words whose meaning they represent and to abandon the necessity of identity for
