Written by leading researchers in fields of measurement, psychophysical scaling, multidimensional scaling, stimulus categorization, and behavioral decision making. Neuroeconomics, Judgment, and Decision Making Evan A. Wilhelms, Valerie F. Reyna, 2014-07-11 This volume explores how and why people make judgments and decisions that have economic consequences and what the implications are for human well-being. It provides an integrated review of the latest research from many different disciplines including social cognitive and developmental psychology, neuroscience, and neurobiology and economics and business. The book has six areas of focus: historical foundations, cognitive consistency and inconsistency, heuristics and biases, neuroeconomics and neurobiology, developmental and individual differences, and improving decisions. Throughout, the contributors draw out implications from traditional behavioral research as well as evidence from neuroscience. In recent years, neuroscientific methods have matured beyond being simply correlational and descriptive into theoretical prediction and explanation, and this has opened up many new areas of discovery about economic behavior that are reviewed in the book. In the final part, there are applications of the research to cognitive development, individual differences, and the improving of decisions. The book takes a broad perspective and is written in an accessible way so as to reach a wide audience of advanced students and researchers interested in behavioral economics and related areas. This includes neuroscientists, neuropsychologists, clinicians, psychologists, developmental social and cognitive economists, and other social scientists, legal scholars, and criminologists, professionals in public health and medicine, educators, evidence-based practitioners, and policy makers.

A Handbook of Process Tracing Methods Michael Schulte-Mecklenbeck, Anton Kuehberger, Joseph G. Johnson, 2019-06-10 A Handbook of Process Tracing Methods demonstrates how to better understand decision outcomes by studying decision processes through the introduction of a number of exciting techniques. In this volume, leading experts discuss the application of these methods and focus on the best

practices for using some of the more popular techniques discussing how to incorporate them into formal decision models This edition has been expanded and thoroughly updated throughout and now includes new chapters on mouse tracking protocol analysis neurocognitive methods the measurement of valuation as well as an overview of important software packages The volume not only surveys cutting edge research to illustrate the great variety in process tracing techniques but also serves as a tutorial for how the novice researcher might implement these methods A Handbook of Process Tracing Methods will be an essential read for all students and researchers of decision making
