Measuring Environmental Quality In Asia:

Measuring Environmental Quality in Asia Peter P. Rogers, 1997 The relationship between industrialization economic growth and environmental protection is now recognized as the essence of the sustainability issue in Asia One of the more difficult aspects facing the development policymaker is how to measure this relationship in concrete ways This study develops a set of environmental indices to serve as guides to assess the state of the environment measure the nature and degree of environmental change and indicate the financing requirements for remediation *Measuring Environmental Quality in Asia* P Rogers, 1997-08-29 The State of the Environment in Asia The Japan Environmental Council, 2012-12-06 In December 1977 we published the first in this series of NGO oriented reports on Asia s environment Ajia Kankyo Hakusho 1997 98 This was published in English by Springer Verlag as The State of the Environment in Asia 1999 2000 Although only a few years have passed since then Asia has seen tumultuous changes in the political economic social environmental and other domains as well as a number of prominent trends that could be regarded as harbingers of the new century China for instance could henceforth decisively affect the evolution of environmental problems not only in Asia but across the entire globe Yet Chinese concern for and initiatives on pollution and environmental damage have increased more quickly than could have been anticipated just a few years ago And on Taiwan where a Democratic Progressive Party president was elected over the long ruling Nationalist Party an attorney who has cooperated with our pollution surveys for a decade Hsieh Chang ting became mayor of Taiwan s largest heavy and chemical industry city of Kaohsiung where he has begun a Green Revolution On the Korean Peninsula which has for many years endured the division of its people as well as political and military tensions there are the beginnings of a new North South dialog These changes are all welcome to those of us who wish to see new advances in environmental cooperation throughout Asia **Asia's Clean Revolution** David Angel, Michal Rock, 2017-09-20 The world s environmental future will be determined in significant part by what happens in the rapidly industrialising and urban economies of Asia The sheer scale of urban population and industrial growth in Asia from Indonesia to China and the energy and materials intensive character of the development process constitutes a dark shadow over the region s and indeed the world s environment And yet this challenge is also an opportunity Precisely because so much of the urban industrial investment within developing Asia has yet to take place the opportunity exists to shape a different development future one that is far less energy materials and waste intensive Asia s Clean Revolution examines the prospects for and pathways to such a new trajectory The book lays out a path breaking vision of how developing economies might go beyond environmental regulation and put in place an array of policies and institutions that could integrate environmental industrial and technological goals These findings provide important input for negotiators considering climate change on a global scale The book approaches the challenge of growth and environment in Asia in a novel way by identifying six major transformational dynamics under way in the world today and assessing whether these can be harnessed to the goal of improved environmental
