Ruttan,2006-01-05 Military and defense related procurement has been an important source of technology development across a broad spectrum of industries that account for an important share of United States industrial production In this book the author focuses on six general purpose technologies interchangeable parts and mass production military and commercial aircraft nuclear energy and electric power computers and semiconductors the INTERNET and the space industries In each of these industries technology development would have

occurred more slowly and in some case much more slowly or not at all in the absence of military and defense related procurement The book addresses three questions that have significant implications for the future growth of the United States economy One is whether changes in the structure of the United States economy and of the defense industrial base preclude military and defense related procurement from playing the role in the development of advanced technology in the future comparable to the role it has played in the past A second question is whether public support for commercially oriented research and development will become an important source of new general purpose technologies A third and more disturbing question is whether a major war or the threat of major war will be necessary to mobilize the scientific technical and financial resources necessary to induce the development of new general purpose technologies When the history of United States technology development in the next half century is written it will focus on incremental rather than revolutionary changes in both military and commercial technology It will also be written within the context of slower productivity growth than of the relatively high rates that prevailed in the United States in the 1950s and 1960s or during the information technology bubble that began in the early 1990s These will impose severe constraints on the capacity of the United States to sustain a global class military posture and a position of leadership in the global economy Capturing Change in Science, Technology, and Innovation National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Developing Science, Technology, and Innovation Indicators for the Future, 2014-08-25 Since the 1950s under congressional mandate the U S National Science Foundation NSF through its National Center for Science and Engineering Statistics NCSES and predecessor agencies has produced regularly updated measures of research and development expenditures employment and training in science and engineering and other indicators of the state of U S science and technology A more recent focus has been on measuring innovation in the corporate sector NCSES collects its own data on science technology and innovation STI activities and also incorporates data from other agencies to produce indicators that are used for monitoring purposes including comparisons among sectors regions and with other countries and for identifying trends that may require policy attention and generate research needs NCSES also provides extensive tabulations and microdata files for in depth analysis Capturing Change in Science Technology and Innovation assesses and provides recommendations regarding the need for revised refocused and newly developed indicators of STI activities that would enable NCSES to respond to changing policy concerns This report also identifies and assesses both existing and potential data resources and tools that NCSES could exploit to further develop its indicators program Finally the report considers strategic pathways for NCSES to move forward with an improved STI indicators program The recommendations offered in Capturing Change in Science Technology and Innovation are intended to serve as the basis for a strategic program of work that will enhance NCSES s ability to produce indicators that capture change in science technology and innovation to inform policy and optimally meet the needs of its user community Data on

Federal Research and Development Investments National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Modernizing the Infrastructure of the National Science Foundation Federal Funds Survey, 2010-02-27 Two surveys of the National Science Foundation's Division of Science Resources Statistics SRS provide some of the most significant data available to understand research and development spending and policy in the United States These are the Survey of Federal Funds for Research and Development and the Survey of Federal Science and Engineering Support to Universities Colleges and Nonprofit Institutions These surveys help reach conclusions about fundamental policy questions such as whether a given field of research is adequately funded whether funding is balanced among fields and whether deficiencies in funding may be contributing to a loss of U S scientific or economic competitiveness However the survey data are of insufficient quality and timeliness to support many of the demands put on them In addition the surveys are increasingly difficult to conduct in times of constrained resources and their technological procedural and conceptual infrastructure has not been modernized for procedure or content Data on Federal Research and Development Investments reviews the uses and collection of data on federal funds and federal support for science and technology and recommends future directions for the program based on an assessment of these uses and the adequacy of the surveys The book also considers the classification structure or taxonomy for the fields of science and engineering **Handbook on the Theory and Practice of Program Evaluation** Albert N. Lerner,2012-09-06 The developed world is struggling with unsustainable promises and unappealing choices and sustained economic growth represents one of the few ways out And over the centuries growth in advanced economies has been strongly linked to innovation Despite the vast amounts written about innovation over the years understanding of its drivers remains surprisingly limited This book by top Harvard Business School professor Josh Lerner seeks to remedy this shortfall It highlights that while organizational economists have made strides in understanding what combinations of incentives and organization structure can encourage innovative breakthroughs many of these insights have not yet received the attention they deserve in the real world or been developed in ways that can easily be applied in real situations The author focuses on two models for encouraging innovation the corporate research laboratory and the start up Each model while proven and successful also faces significant challenges and ambiguities A central argument is that there remains considerable potential for hybrids between these two approaches This book draws on important research in economics and reviews different approaches to innovation combining this with a series of case examples to explore the challenges that face start up firms large firms and nations It is essential reading for anybody faced with the challenge of innovation Science Policy Up Close

John Harman Marburger (III),2015-02-10 In a career that included Presidential Science Advisor to George W Bush John Marburger stood on the front line of battles that pulled science deep into the political arena Science controversies he discovered are never just about science As his reflections show science can no longer be shielded from public scrutiny and government supervision D. Allan Bromley, Nuclear Scientist and Policy Innovator David Allan Bromley,Paul A.

Fleury,2006 This book covers two aspects of the career of D Allan Bromley the science policy aspect and the scientific aspect In the first half of the book contributions from Governor John Sununu former White House Chief of Staff under President George H W Bush Neal Lane former Science Adviser to President William Clinton John Marburger III Science Adviser to President George W Bush and Mary Good former Undersecretary of Commerce highlight the role of Bromley as Science

Adviser to President George H W Bush and a maker of science policy in the second part of the 20th Century This part is of interest to science policy scholars historians and young persons wishing to start a career in science policy In the second half of the book articles by directors of laboratories and leading scientists discuss future programs in all areas of nuclear physics low energy medium energy and high energy to which Bromley greatly contributed in the USA Europe and Japan This part of the book is of interest to all researchers in the field of nuclear physics as it provides a comprehensive but succinct overview of the field and indicates directions for future research in the first part of the 21st century A Practical Guide for Developing Cross-Disciplinary Collaboration Skills David Gosselin,2023-08-23 Solutions to societal and organizational problems require people from diverse fields of expertise to effectively work in team based collaborative environments To create these environments we need to address a myth in modern culture that people have natural abilities to collaborate and work together Collaboration and teamwork are skills As such these skills need to be learned and practiced Commonly collaboration is learned through trial and error Team members have little or no training in how to effectively and efficiently harness the diversity of strengths among team members and maximize their contributions to the team The purpose of this book is to provide a practical process oriented guide that at its most fundamental level is about building relationships and promoting communication and learning among diverse groups of individuals that results in creative collaborative and inclusive problem solving environments This volume provides explicit approaches and processes that will help team members more effectively and efficiently create new knowledge and solutions for societal and organizational problems through collective action Science, Technology, and Global Economic Competitiveness United States. Congress. House. Committee on Science,2006 **National Innovation, Indicators and Policy** L. Earl,2006-01-01 This book takes stock of what is known about the process of innovation and its effects and the policy interventions that influence both It provides insights into future research required to support evidence based policy making and makes clear the need to take a systems approach to the analysis of innovation its outcomes and its impacts The contributors explore the fact that economic theory statistical measurement and the need to achieve targets are combining to shift policy focus towards the economic and social impacts of innovation This is forcing economists and statisticians to look for new measures indicators and analytical frameworks to support the public policy debate and the implementations of change necessary for success The book emphasizes the importance of linkages and communities of practice in measuring and analyzing innovation and focuses on the importance of social sciences as well as natural sciences to the activity of innovation policy relevant discussions on the measurement gaps in the activity of innovation quantitative results of analysis relating to the output of innovation activities theoretical frameworks and concepts for measurement of the activity of innovation suggestions for new measurement directions for the activity of innovation which will lead into an international forum to discuss indicator development at the OECD over the next decade Illustrating that the expectations of innovation policies are being raised this book will prove fascinating reading for
