Dictionary of Antibiotics and Related Substances Barrie W. Bycroft, David J. Payne, 2013-08-09 Bacterial and parasitic diseases are the second leading cause of death worldwide according to a report by the London School of Economics Due to the emergence of drug resistant superbugs like methicillin resistant Staphylococcus aureus MRSA traditional antibiotics such as penicillin and its derivatives are in danger of becoming obsolete In an effort to combat this problem pharmaceutical companies continue to research new and effective antibiotics The Dictionary of Antibiotics and Related Substances Second Edition is a definitive reference work dealing with this crucially important class of biochemicals It consists of a comprehensive survey of the antibiotic field providing a single volume resource and a significant update to the first edition published in 1988 Each dictionary entry contains the chemical name and synonyms CAS Number chemical structure biological activity and a concise bibliography Entries include naturally occurring antibiotics such as the beta lactams penicillins cephalosporins and carbapenems and aminoglycosides semisynthetic antibiotics the most common type available modified chemically from original compounds found in nature and synthetic antibiotics including the sulfonamides the quinolones and the oxazolidinones It is estimated that there are approximately 10 000 antibiotics known and this revised edition of the successful compilation covers all of the different classes The dictionary also includes fully searchable downloadable resources

Marzilli, 1982 **Verzeichnis lieferbarer Bücher**, 1988 *Mechanism of Action of Antieukaryotic and Antiviral Compounds* Fred E. Hahn, 2012-12-06 When Antibiotics I was published in 1967 the teleological view was held by some that antibiotics were substances elaborated by certain microorganisms for the purpose of competing with other microorganisms for survival in mixed ecological environments However not only had J EHRLICH and his associates shown 15 years earlier that chloramphenicol was produced by Streptomyces venezuelae in cultures of sterilized soils but not in parallel cultures of the same soils which were not sterilized but operationally the search for anti cancer antibiotics was actively under way Antibiotics I reporting on numerous such substances although the concept of antibiosis could not logically justify such undertakings This editor hesitates to accept the use of the term antibiotic for anti microbial agents of non microbiological origins which is sometimes encountered but neither does he subscribe to the view that antibiotics are in some fundamental manner different from chemotherapeutic substances of other origins Modes and mechanisms of action of chemotherapeutic compounds are not systematic functions of their origins nor of the taxonomical position of the target organisms Consequently in the selection of topics for Antibiotics III published in 1975 synthetic drugs and natural products of higher plants alkaloids were represented

along with antibiotics in the strict sense of the definition We now present Antibiotics V for whose assembly the same selection criteria were applied as for Antibiotics III The aggregate length of the contributions rendered it impractical to place the entire text between the covers of one book
