Mechanism Of Myofilament Sliding In Musc:

Mechanism of Myofilament Sliding in Muscle Contraction Haruo Sugi, Gerald H. Pollack, 2012-12-06 This volume presents the entire proceedings of the symposium organized by one of us H S on November 11 to 15 1991 at Hakone Japan under the title of Mechanism of Myofilament Sliding in Muscle Contraction Among various kinds of energy transduction mechanisms in biological systems the mechanism of muscle contraction has been studied most intensively and extensively over many years Since the monumental discovery by the two Huxleys and coworkers that muscle contraction results from relative sliding between the thick and thin myofilaments attention of muscle investigators has been focused on the question what makes the filaments slide past one another In response to the above question A F Huxley and Simmons put forward a contraction model in 1971 in which globular heads of myosin cross bridges extending from the thick filament first attach to actin on the thin filament and then change their angle of attachment to actin power stroke leading to force generation or myofilament sliding until they detach from the thin filament The rocking cross bridge contraction model seemed to be entirely consistent with the kinetic scheme of actomyosin ATPase published by Lymn and Taylor at the same time thus giving a strong impression to the people concerned that the muscle contraction mechanism would soon be sorted out In his review lecture in 1974 however A F Mechanisms of Work Production and Work Absorption in Muscle Haruo Sugi, Gerald H. Pollack, 2012-12-06 In contrast to common practice we have always tried to include as many discussions held at the meeting in our proceedings as possible so as to enable readers to properly evaluate each paper presented as well as to learn of future prospects in this field of research Although the policy of including discussions occasions a long publication delay we believe that it is worth repeating in our future publication as we have met a number of young investigators fascinated by the discussions in our proceedings In the concluding remarks in this volume Dr Hugh E Huxley a principal architect of the sliding filament mechanism of muscle contraction states that the molecular mechanism of myofilament sliding remains mysterious to all of us We hope that this volume will stimulate muscle investigators to design and perform novel experiments to clarify the mysteries in muscle contraction Haruo Sugi and Gerald H Pollack excerpted from the Preface *Methods and Applications in Striated Muscle Physiology* Joseph J. Michele, 2000 **Directory of Published Proceedings**, 1996 Optical Trapping And Manipulation Of Neutral Particles Using Lasers: A Reprint Volume With Commentaries Arthur Ashkin, 2006-12-29 This important volume contains selected papers and extensive commentaries on laser trapping and manipulation of neutral particles using radiation pressure forces Such techniques apply to a variety of small particles such as atoms molecules macroscopic dielectric particles living cells and organelles within cells These optical methods have had a revolutionary impact on the fields of atomic and molecular physics biophysics and many aspects of nanotechnology In atomic physics the trapping and cooling of atoms down to nanokelvins and

even picokelvin temperatures are possible These are the lowest temperatures in the universe This made possible the first demonstration of Bose Einstein condensation of atomic and molecular vapors Some of the applications are high precision atomic clocks gyroscopes the measurement of gravity cryptology atomic computers cavity quantum electrodynamics and coherent atom lasers A major application in biophysics is the study of the mechanical properties of the many types of motor molecules mechanoenzymes and other macromolecules responsible for the motion of organelles within cells and the locomotion of entire cells Unique in vitro and in vivo assays study the driving forces stepping motion kinetics and efficiency of these motors as they move along the cell's cytoskeleton Positional and temporal resolutions have been achieved making possible the study of RNA and DNA polymerases as they undergo their various copying backtracking and error correcting functions on a single base pair basis Many applications in nanotechnology involve particle and cell sorting particle rotation microfabrication of simple machines microfluidics and other micrometer devices The number of applications continues to grow at a rapid rate The author is the discoverer of optical trapping and optical tweezers With his colleagues he first demonstrated optical levitation the trapping of atoms and tweezer trapping and manipulation of living cells and biological particles This is the only review volume covering the many fields of optical trapping and manipulation The intention is to provide a selective guide to the literature and to teach how optical traps really work Index of Conference Proceedings, 1994 *Proceedings in Print*, 1995 *Optical Tweezers* Miles J.
