**Metal-Catalysed Reactions of Hydrocarbons** Geoffrey C. Bond,2006-10-03 This unique book drawing on the author's lifetime experience critically evaluates the extensive literature on the field of Metal Catalysed Reactions of Hydrocarbons Emphasis is placed on reaction mechanisms involving hydrogenation hydrogenolysis skeletal and positional isomerisation and exchange reactions The motivation for fundamental research in heterogeneous catalysis is to identify the physicochemical characteristics of active centres for the reaction being studied to learn how these may be modified or manipulated to improve the desired behavior of the catalyst and to recognize and control those aspects of the catalyst's structure that limit its overall performance By restricting the subject of the book to hydrocarbons Bond has progressively developed the subject matter to include areas of importance both to researchers and to those working in the industry

**Principles of Combustion** Allan T. Kirkpatrick,Kenneth K. Kuo,2024-11-27 The new edition of a classic textbook on combustion principles and processes covering the latest developments in fuels and applications in a student friendly format Principles of Combustion provides clear and authoritative coverage of chemically reacting flow systems

*Electrocatalysis* Jacek Lipkowski, Phil N. Ross, 1998-04-13 A comprehensive review of advances in one of today s most technologically important research fields Spurred on by society s increasingly urgent demand for an inexpensive environment friendly alternative to the internal combustion engine research into electrocatalytic fuel cells has yielded many exciting advances in the past few years This rapid rate of progress however has created a daunting challenge for anyone attempting to track the important new trends in electrocatalysis by sorting through the huge and rapidly growing body of world literature in the field

Electrocatalysis was designed to save scientists hours of arduous legwork by providing an authoritative review of the most important recent advances in all technologically relevant aspects of electrocatalysis Leading researchers from North America Europe and the Far East share what they know about an array of related topics including Electrocatalysis of hydrogen and oxygen electrode reactions Electrooxidation of small organic molecules Design and synthesis of new electrocatalytic materials The distribution and storage of hydrogen in metal hydrides Hydrogenation of organic compounds as a means of hydrogen storage Electron ion and atom transfer reactions Influence of the double layer structure on the rate of charge transfer A unified theory of electron and ion transfer reactions at metal electrodes Electrocatalysis is an indispensable working resource for electrochemists chemical engineers surface scientists and materials scientists

*Fundamentals and Technology of Combustion* F El-Mahallawy, S. E-Din Habik, 2002-07-10 Fundamentals and Technology of Combustion contains

brief descriptions of combustion fundamental processes followed by an extensive survey of the combustion research technology. It also includes mathematical combustion modeling of the processes covering mainly premixed and diffusion flames where many chemical and physical processes compete in complex ways for both laminar and turbulent flows. The combustion chemistry models that validate experimental data for different fuels are sufficiently accurate to allow confident predictions of the flame characteristics. This illustrates a unique bridge between combustion fundamentals and combustion technology which provides a valuable technical reference for many engineers and scientists. Moreover, the book gives the reader sufficient background of basic engineering sciences such as chemistry, thermodynamics, heat transfer, and fluid mechanics. The combustion research and mathematical models fit between small scale laboratory burner flames and large scale industrial boilers, furnaces, and combustion chambers. The materials have been collected from previous relevant research and some selected papers of the authors and co-workers which have been presented mainly in different refereed journals, international conferences, and symposia, thus providing a comprehensive collection. Furthermore, the book includes some of the many recent general correlations for the characteristics of laminar, turbulent, premixed, and diffusion flames in an easily usable form. The authors believe that further progress in optimizing combustion performance and reducing polluting emissions can only be treated through understanding of combustion chemistry.
