The Neurobiologic Mechanisms in

Manipulative Therapy I.M. Korr, 2012-12-06 At the request of a Subcommittee of the United States Senate in February 1975 the National Institute of Neurological Disorders and Stroke now the National Institute of Neurological and Communicative Disorders and Stroke conducted a Workshop on the Research Status of Spinal Manipulative Therapy The Workshop was held in response to the Senate Subcommittee's request for an independent unbiased study of the fundamentals of the chiropractic profession Since spinal manipulative therapy is a key tenet of chiropractic the Institute felt a research workshop focused on that issue would provide a useful base upon which to examine the broad concept of the role of biomechanical alterations of the spine in health and disease This would include the pathophysiologic and clinical hypotheses formulated by medical and osteopathic physicians as well as chiropractors Why the relatively sudden interest of the Senate Subcommittee in chiropractic There were probably many reasons for that interest but suffice to say anticipation of discussion on the role of chiropractic in any national system of health insurance could in itself have provided adequate stimulus for the request In any case the NINCDS was asked to review what was and what was not known about the fundamentals of chiropractic I stress fundamentals since as a research organization the NINCDS is not charged with reviewing matters such as clinical education licensure or clinical practice A small expert committee of scientific consultants helped the Institute design the format and agenda for the Workshop

Glandular Mechanisms of Salivary Secretion John Raymond Garrett, Jörgen Ekström, L. C.

Anderson, 1998-01-01 Saliva is essential for oral health and influences all events in the mouth A deficiency of saliva can have devastating consequences Therefore it is important to have a book about the basic tissue mechanisms involved in the secretion of saliva based on an holistic approach With such an aim in mind this book contains chapters covering the

histological basis for secretion electrophysiological events electrolyte and water secretion protein synthesis and secretion bloodflow capillary dynamics myoepithelial activity glandular permeability hormonal influences including the effects of diabetes and the synthesis and secretion of IgA in man The chapters have been written by international experts in the field who present balanced accounts of their subjects The secretory mechanisms described in this book have a far reaching impact beyond the salivary field and have applicability to all forms of exocrine secretion Salivary glands offer many advantages for experimental study of these phenomena since they can be tested more precisely than most other glands having ducts that can readily be cannulated for assessing the secretion As a single source of up to date data this book will benefit doctors and dentists and anyone interested in secretory phenomena including physiologists biochemists and cell biologists It not only brings together all available data on this subject as it stands at the turn of the century but also lays down a sound platform of knowledge on which further investigations can be based *Myocardial Ischemia: Mechanisms, Reperfusion, Protection*

Morris Karmazyn, 2013-03-12 Myocardial ischemia and subsequent reperfusion of the ischemic myocardium represent complex phenomena encompassing numerous physiological processes This book aims at enhancing our understanding of these processes and stresses recent important developments in this very active area of research The concise state of the art reviews cover recent advances in many fields important to the area of myocardial ischemia and reperfusion including physiology pathology pharmacology biochemistry and molecular biology with reference to clinical relevance and applicability of these findings Major areas which are highlighted include vascular mechanisms resulting in myocardial ischemia cellular events in the ischemic postinfarcted and reperfused myocardium as well as new exciting developments in cardiac protection that involve both novel pharmacological approaches as well as endogenous cardioprotective mechanisms such as preconditioning Aimed at both the basic and clinical cardiovascular investigator the book comprehensively reviews the rapid progress made in recent years in understanding the etiology of myocardial ischemia and reperfusion It will further serve as an authoritative reference for all those interested in learning about the important developments in the treatment of myocardial ischemic and reperfusion disorders **Vasodilatation** Paul M. The Fundamental Mechanisms of Shock L. Hinshaw, 2013-04-17 Research to which so much discussion and thought will be devoted at this symposium appears to have been downgraded in our society Yet learning and education per se rank high in our set of values from the point of view of both lay people and professional workers For some reason we fail to detect the illogic inherent in this value system for what is research but the learning of new information Apparently our society associates learning only with known long gathered information This symposium I believe will generate new information about shock through the integration of knowledge of many investigators who have come to share a common meeting ground Hopefully the worth of this and similar endeavors will gain the recognition and more important the support of the public In the next decade or so I believe that shock research workers will be channeling their efforts more and more into investigating the repair of damaged cells The individual cell and its products must be scrutinized just as carefully as we examine the whole organism or its collections of cells Shock is an exciting area of research but it involves years of painstaking work Moreover the society which will reap its fruits must be persuaded to share the burden of its support John A Schilling M D IAbstracted from Dr John A Schilling's Opening Statement at the symposium on October 1 1971

Physiology of the Gastrointestinal Tract Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10 FROM THE PREFACE The original purpose of the First Edition of Physiology of the Gastrointestinal Tract to collect in one set

of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition. The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition. The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation, signaling networks in development, apoptosis, and mechanisms in malignancies. Most of the chapters in this section were edited by Juanita L. Merchant. Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology, neural regulation, stress, and the regulation of food intake. Almost all of the chapters were recruited and edited by Jackie D. Wood. The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E. Barrett. The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion. The last section on Digestion and Absorption contains new chapters on the intestinal barrier, protein sorting, and ion channels along with those focusing on the uptake of specific nutrients. These chapters were recruited and edited by Hamid M. Said and Faye K. Ghishan. Collected in one set, the most current and comprehensive coverage of gastrointestinal physiology. Information presented in a style that is both readable and understandable. Valuable to the specialized researcher, the clinical gastroenterologist, the teacher, and the student. Features an entirely new section on Immunology and Inflammation. Each section edited by the preeminent scientist in the field.

Emerging Issues and Controversies in Infectious Disease I.W. Fong, 2009-01-01. In this edition of the Emerging Infectious Diseases of the 21st Century Series, the editor reviews the research, diagnosis, and treatment of some common infections facing researchers, clinicians, and family physicians such as sinusitis, otitis media, and pertussis in adults. Recent studies and surveys have shown that these conditions are often overdiagnosed and treated unnecessarily with antibiotics. The approach and guidelines for diagnosis and management are reviewed in this volume. Other more complicated but less common conditions challenging internists, clinical infectious disease consultants, and other specialists are also reviewed: meningitis, ventilator-associated pneumonia, sepsis, hepatitis C, B, etc.

Autonomic Failure Christopher J. Mathias, Sir Roger Bannister, 2013-06-13. This fifth edition of the *Autonomic Failure* covers the many recent advances made in our understanding of the autonomic nervous system. There are numerous new chapters and extensive revisions of all other contributions. This volume makes diagnosis

Applied physiology has been updated with recent concepts on pathophysiology and recent advances in the basic investigations and therapeutic principles. To further upgrade the book, many new figures, tables and flowcharts have been added. Online Content FAQs with reference for the answers in the book. *Edhf 2000* Paul M. Vanhoutte, 2003-09-02 Understanding the nature and role of endothelium derived hyperpolarizing factor appears to be crucial in the quest for improved treatments for hypertension, diabetes, ischemia, reperfusion and other vascular disorders. EDHF 2000 comprises the proceedings of the Third International Symposium on endothelium dependent hyperpolarizations. The first two meetings established a role for EDHF and other chemical factors involved in endothelium dependent hyperpolarizations. These proceedings focus upon the role of gap junctions in cardiovascular responses and investigate the chemical identity of EDHF. Additional chapters on Physiology, Hormonal Modulation and Pathological Changes are also included. EDHF 2000 will be of interest not only to physiologists and pharmacologists puzzled by the complexity of the interactions between the endothelium and underlying vascular smooth muscle cells but also clinical researchers and physicians treating patients with cardiovascular diseases.
