Fatigue of Metallic Materials M. Klesnil, P. Lukác, 1992-04-13 This book reviews problems in the mechanical behaviour of cyclically loaded metallic materials primarily with regard to the nature of the fatigue process The first edition of the book appeared in 1980 The present second edition represents a revised form of the original book and also covers recent developments in the field As the book focuses on physical metallurgical aspects it occupies a unique and important position in the technical literature which has so far been devoted mainly to engineering metal fatigue problems and their technical solution in specific practical cases The book provides a compact review of current knowledge on physical metallurgical processes that accompany and affect the fatigue of metallic materials and also presents the background for applying the new results to practical designing and to the selection of materials in engineering practice The authors present an updated review of results from countries both in the east and the west and cover a relatively large field in a concise manner The work will be of value to research workers and students following advanced and post graduate courses in the fields of materials science and mechanical engineering

Thermo-Mechanical Processing of Metallic Materials Bert Verlinden, Julian Driver, Indradev Samajdar, Roger D. Doherty, 2007-06-07 Thermo Mechanical Processing of Metallic Materials describes the science and technology behind modern thermo mechanical processing TMP including detailed descriptions of successful examples of its application in the industry This graduate level introductory resource aims to fill the gap between two scientific approaches and illustrate their successful linkage by the use of suitable modern case studies The book is divided into three key sections focusing on the basics of metallic materials processing The first section covers the microstructural science base of the subject including the microstructure determined mechanical properties of metals The second section deals with the current mechanical technology of plastic forming of metals The concluding section demonstrates the interaction of the first two disciplines in a series of case studies of successful current TMP processing and looks ahead to possible new developments in the field This text is designed for use by graduate students coming into the field for a graduate course textbook and for Materials and Mechanical Engineers working in this area in the industry Covers both physical metallurgy and metals processing Links basic science to real everyday applications Written by four internationally known experts in the field

Materials for Springs, 2007-09-06 Materials for springs is basically intended for engineers related to spring materials and technologies who graduated from metallurgical or mechanical engineering course in technical high school or in other higher engineering schools as well as those who are related to purchases or sales of spring materials This book is the first comprehensive treatment in this specific topic It is written by experts of the JSSE Japan Society of Spring Engineers

Handbook of Structural Life Assessment Raouf A. Ibrahim, 2017-03-29 This important self contained reference deals with structural life assessment SLA and structural health monitoring SHM in a combined form SLA periodically evaluates the state and condition of a structural system and provides recommendations for possible maintenance actions or the end of structural service life It is a diversified field and relies on the theories of fracture mechanics fatigue damage process and reliability theory For common structures their life assessment is not only governed by the theory of fracture mechanics and fatigue damage process but by other factors such as corrosion grounding and sudden collision On the other hand SHM deals with the detection prediction and location of crack development online Both SLA and SHM are combined in a unified and coherent treatment **Metal Industry**, 1904 **Metal Finishing**, 1923 **Board of Trade Journal**, 1926

Superplasticity of Alloys, Intermetallides and Ceramics Oscar A. Kaibyshev, 2012-12-06 Superplasticity is shown to be a universal phenomenon in materials ranging from metals and intermetallics to ceramics Superplastic deformation facilitates the production of materials with specifically chosen properties This is illustrated using the examples of Mg Al and Ti based commercial alloys steels and superalloys Some of the strenghts of this book are the broad range of materials studied the reduction of scientific results to a form suitable for the practitioner a profound physical analysis of the phenomenon a new approach to superplastic treatment as a kind of strain heat treatment the presentation of new data on superplastic flow and on production techniques of micro and submicrocrystalline structures **Board of Trade Journal of Tariff and Trade**
