Dinosaurs David Norman, 2017-09-21 Dinosaurs are fascinating creatures and their popularity seems never ending fuelled by films such as Jurassic Park and documentaries such as Walking with Dinosaurs Yet dinosaurs or more precisely non avian dinosaurs last trod the Earth 65 million years ago All we know of them today are their fossilised bones the tracks and traces that they left behind and in very rare instances some of the soft tissues or even traces of their

chemistry In many respects dinosaurs present us with one of the ultimate forensic challenges they comprise the fragmentary remains of creatures that died many tens of millions of years ago rather than just recently or a few tens of years ago which is the problem usually faced by forensic pathologists How much do we really know about them and to what extent can their remains inform us about ancient worlds and indeed about the history of our planet In this Very Short Introduction David Norman discusses how dinosaurs were first discovered and interpreted and how our understanding of them has changed over the past 200 years He looks at some of the amazing discoveries that have enabled us to gain new and unexpected insights into dinosaurs as animals with natural histories and behaviours and considers some of the biggest questions in dinosaur biology such as the implications of them having warm blood Norman also shows how research upon dinosaurs has been enriched particularly in recent decades by technological break throughs which complement the informed speculation and luck which have played a part in many of the major discoveries ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable *The Horned Dinosaurs* Peter Dodson, 2017-03-14 The horned dinosaurs a group of rhinoceros like creatures that lived 100 to 65 million years ago included one of the greatest and most popular dinosaurs studied today Triceratops Noted for his flamboyant appearance marked by a striking array of horns over the nose and eyes a long bony frill at the back of the head and an assortment of lumps and bumps for attracting females this herbivore displayed remarkable strength in its ability to fight off Tyrannosaurus rex It was also among the last dinosaurs to walk the earth In telling us about Triceratops and its relatives the Ceratopsia Peter Dodson here re creates the sense of adventure enjoyed by so many scientists who have studied them since their discovery in the mid nineteenth century From the badlands of the Red Deer River in Alberta to the Gobi Desert Dodson pieces together fossil evidence to describe the ceratopsians themselves their anatomy biology and geography and he evokes the human dimension of their discovery and interpretation An authoritative survey filled with many original illustrations this book is the first comprehensive presentation of horned dinosaurs for the general reader Dodson explains first the fascinating ways in which the ceratopsians dealt with their dangerous environment There follows a lesson on ceratopsian bone structure which enables the reader quickly to grasp the questions that still puzzle scientists concerning features such as posture gait footprints and diet Dodson evenhandedly discusses controversies that continue for example over sexual dimorphism and the causes of the dinosaurs disappearance Throughout his narrative we are reminded that dinosaur study is a human enterprise We meet the scientists who charmed New York high society into financing expeditions to Mongolia home of Triceratops predecessors as well as those who used their poker winnings to sustain paleontology expeditions Rich in fossil lore and in tales of adventure the world of the Ceratopsia is presented here for specialists and general readers alike Originally published in 1996 The Princeton Legacy
