to date resource In the Images of Development Tridib Banerjee, 2021-06-08 The urban legacy of the Global South since the colonial era and how sustainable development and environmental and social justice can be achieved Remarkably little of the expansive literature on development and globalization considers actual urban form and the physical design of cities as outcomes of these phenomena The development that has shaped historic transformations in urban form and urbanism and the consequent human experiences remains largely unexplored In this book Tridib Banerjee fills this void by linking the idea of development with those of urbanism urban form and urban design focusing primarily on the contemporary cities in the developing world the Global South and their intrinsic prospects in city design Further he examines the endogenous possibilities for the future design of these cities that may address growing inequality and the environmental crisis Banerjee deftly traces the urban legacy of the Global South from the beginning of the colonial era closely examining the economic political and ideological forces that influenced colonial and postcolonial development drawing from relevant experiences of different cities in the developing world and discussing the arguments for the historic parity of these cities with their Western counterparts Finally Banerjee considers essential notions of future city design that are grounded in the critical challenges of sustainable development equity environmental and social justice and diversity and how such outcomes can be achieved This book serves as the opening of a long overdue conversation among design development and planning scholars and practitioners and those interested in the urban development of the Global South

Differential Heterogenesis Alessandro Sarti, Giovanna Citti, David Piotrowski, 2022-07-15 This book describes about unlike usual differential dynamics common in mathematical physics heterogenesis is based on the assemblage of differential constraints that are different from point to point The construction of differential assemblages will be introduced in the present study from the mathematical point of view outlining the heterogeneity of the differential constraints and of the associated phase spaces that are continuously changing in space and time If homogeneous constraints well describe a form of swarm intelligence or crowd behaviour it reduces dynamics to automatisms by excluding any form of imaginative and creative aspect With this study we aim to problematize the procedure of homogenization that is dominant in life and social science and to outline the dynamical heterogeneity of life and its affective semiotic social historical aspects Particularly the use of sub Riemannian geometry instead of Riemannian one allows to introduce disjointed and autonomous areas in the virtual plane Our purpose is to free up the dynamic becoming from any form of unitary and totalizing symmetry and to develop forms action thought by means of proliferation juxtaposition and disjunction devices After stating the concept of differential heterogenesis with the language of contemporary mathematics we will face the problem of the emergence of the semiotic function recalling the limitation of classical approaches Hjelmslev Saussure Husserl and proposing a possible genesis of it from the heterogenetic flow previously defined We consider the conditions under which this process can be polarized to constitute different planes of Content C and Expression E each one equipped with its own formed substances A possible but not unique process of

polarization is constructed by means of spectral analysis that is introduced to individuate E C planes and their evolution The heterogenetic flow solution of differential assemblages gives rise to forms that are projected onto the planes offering a first referring system for the flow that constitutes a first degree of semiosis Off Sites Bertie Ferdman, 2018-07-30 Honorable Mention ATHE s 2018 Outstanding Book Award Contextualizing the techniques and methods of the incredibly rich and vital genre of site specific performance author Bertie Ferdman traces the evolution of that term Originally used for experimental staging practices and then later also for engaged situational events site specific is no longer sufficient for the genre s many contemporary variations Using the term off site Ferdman illustrates five distinct ways artists have challenged the disciplinary framework of site specific theatre blurring the traditional boundaries between the fictional and the real changing how the audience and actor interact with each other and whether they are physically together or apart fabricating sites from physically bound conceptually constructed or virtual spaces staging live situations in real nonreal and often mediated encounters and challenging our preconceived notions of time and space Tracing the genealogy of site based work through the twentieth and twenty first centuries Ferdman outlines the theoretical groundwork for her study in the introduction Individual chapters focus on distinct types of off sites the interdisciplinary discourse of disciplinary sites the spaces of audience engagement with spectator sites the dislocation of time for temporal sites and the historiographical spaces of mapping for urban sites Ferdman examines site based work being done in the Americas by contemporary companies and artists experimenting with new forms and practices for site driven theatre Key productions discussed include Private Moment by David Levine Geyser Land by Mary Ellen Strom and Ann Carlson Jim Findlay s Dream of the Red Chamber and Lola Arias Mi Vida Despu s
