New Directions In The Economic Theory Of The Environment:

New Directions in the Economic Theory of the Environment Carlo Carraro, Domenico Siniscalco, 2009-09-03 This volume provides a broad survey of the recent developments in the new economics of the environment and reports the state of the art on a new set of environmental problems analytical tools and economic policies Throughout the volume environmental problems are analyzed in an open generally noncompetitive economy with transnational or global externalities The first part deals with the relationship between the environment economic growth and technological innovation The second part analyzes the optimal design of environmental taxation while the third part considers the international dimension of environmental policy

New Directions in Economic Geography B. Fingleton, 2007-01-01 This book is a serious attempt to cover all of the relevant subdisciplines in the geographical economics framework I would recommend the book to students of economic geography regional economics and related disciplines Frans Boekema *Journal of Regional Science* this book is empirically and theoretically comprehensive in its scope The nearly eighteen authors who have contributed to this book present a truly transatlantic perspective on NEG this volume will be extremely useful to those dealing with rigorous modelling to examine spatial issues in economics geography and planning Rajiv Thakur *Regional Science Policy and Practice* I recommend the book The papers of a high quality well written and organized empirical analyses are based on the most advanced empirical techniques and the reader enjoys their application Roberta Capello *Growth and Change* A very interesting volume indeed recommended reading for everyone interested in theorizing space in economics or working in the empirical spatial economic research arena Economic Geography Research Group This important book explores original and alternative directions for economic geography following the revolution precipitated by the advent of so called new economic geography NEG Whilst to some extent the volume could be regarded as part of the inevitable creative destruction of NEG theory it does promote the continuing role of theoretical and empirical contributions within spatial economic analysis in which the rationale of scientific analysis and economic logic maintain a central place With contributions from leading experts in the field the book presents a comprehensive analysis of the extent to which NEG theory is supported in the real world By exploring whether NEG theory can be effectively applied to provide practical insights the authors highlight novel approaches emerging trends and promising new lines of enquiry in the wake of advances made by NEG Rigorous yet engaging this book will be an essential tool for academics and researchers specialising in regional studies urban and spatial economics and economic geography It will also have widespread appeal amongst policymakers involved in planning and land use

New Directions in Development Economics Mats Lundahl, Benno Ndulu, 2005-08-10 *New Directions in Development Economics* is divided into two parts The first half considers the dilemma of growth with special reference to its environmental cost The second half focuses on the role of the state in the context of the growing dominance of the free market argument The contributors include Paul Collier Partha Dasgupta Ronald Findlay and Deepak Lal

Environmental Policy in an International

Perspective Laura Marsiliani, Michael Rauscher, Cees Withagen, 2013-06-29 The volume contains papers presented at a conference On the International Dimension of Environmental Policy It deals with two issues international environmental agreements environmental policies in open economies Both issues are hot topics The debate on how to cope with global climate change has become increasingly heated and controversial and the relationship between trade and the environment is on the WTO agenda The book contains review papers in which leading scholars in the field summarise the state of the art and original research extending the state of the art Most of the papers are theoretically oriented but some papers also present empirical results using new econometric methods and new data The book contains material for those students of economics and researchers who wish to deepen their knowledge in the area of International Environmental Economics but also for those who endeavour to break new ground in this important field of research

Cooperative Game Theory and Its Application to Natural Environmental and Water Resource Issues: 2. Application to Natural and Environmental Resources

Stefano Zara, Fioravante Patrone, Ariel Dinar, 2006 *India and Global Climate Change* Michael A. Toman, Ujjayant Chakravorty, Shreekanth Gupta, 2010-09-30 Though the impact of climate change will most likely be greatest with the already poor and vulnerable populations in the developing world much of the writing about the costs and benefits of different policies to reduce greenhouse gas GHG emissions is by Western scholars working in advanced industrialized economies Drawing the majority of its contributions from authors based at Indian universities and other research centers India and Global Climate Change provides a developing world perspective on the debate With a population of over one billion and an economy that is undergoing substantial restructuring and greatly increased economic growth after a number of years of stagnation India has an exceptional stake in the debate about climate change policy Using the Indian example this volume looks at such policy issues as the energy economy relationships that drive GHG emissions the options and costs for restricting GHG emissions while promoting sustainable development and the design of innovative mechanisms for expanded international cooperation with GHG mitigation

International Environmental Agreements on Climate Change Carlo Carraro, 2013-06-29 Climate change is one of the major environmental concern of many countries in the world Negotiations to control potential climate changes have been taking place from Rio to Kyoto for the last five years There is a widespread consciousness that the risk of incurring in relevant economic and environmental losses due to climate change is high Scientific analyses have become more and more precise on the likely impacts of climate change According to the Second Assessment Report of the Intergovernmental Panel on Climate Change current trends in greenhouse gases GHGs emissions may indeed cause the average global temperature to increase by 1.3 to 5.8 °C over the next 100 years As a result sea levels are expected to rise by 15 to 95 cm and climate zones to shift towards the poles by 150 to 550 km in mid latitudes In order to mitigate the adverse effects of climate change the IPCC report concludes that a stabilization of atmospheric concentration of carbon dioxide one of the major GHGs at 550 parts per million by volume ppmv is recommended This would imply a reduction of global emissions of

about 50 per cent with respect to current levels In this context countries are negotiating to achieve a world wide agreement on GHGs emissions control in order to stabilize climate changes Despite the agreement on targets achieved in Kyoto many issues still remain unresolved

Game Practice and the Environment Carlo Carraro,Vito Fragnelli,2004-01-01 This book summarises the latest achievements of researchers involved in the application of game theory to the analysis of environmental matters It provides an overview of different methods and applications and gives the reader new insights on the solutions to complex environmental problems The authors investigate various game theoretic approaches including cooperative and non cooperative game theory and analyse both dynamic and static games They illustrate the application of these approaches to global and local environmental problems and present novel but effective tools to support environmental policy making In particular they focus on three important issues climate negotiations and policy the sharing of environmental costs and environmental management and pollution control

Behavioral and Distributional Effects of Environmental Policy Carlo Carraro,Gilbert E. Metcalf,2009-02-15 Most people would agree that it makes sense to tax a company that pollutes in a way that directly reflects the amount of environmental and social damage it has done Yet in practice such taxes are fraught with difficulty and have far reaching implications A company facing a new tax may lay off workers for example exacerbating an unemployment problem This volume focuses on such external issues and examines in detail the trade offs involved in designing policies to deal with environmental problems Reflecting the broad nature of the subject the contributors include leading economists in the areas of public finance industrial organization and trade theory as well as environmental economists Integrating both theoretical and empirical methods they examine environmental policy design as it relates to location decisions compliance costs administrative costs effects on research and development and international factor movements Shedding light on an extraordinarily complex and important topic this collection will be of interest to all those involved in designing effective environmental policy

Efficiency and Equity of Climate Change Policy Carlo Carraro,2013-06-29 Efficiency and Equity of Climate Change Policy is a comprehensive assessment of the economic effects of climate change policy addressing the issues with a quantitative modelling approach The book thus goes beyond the usual statements on the efficiency of economic instruments to identify the way gains and losses are distributed who gains and who loses Both the costs and benefits of climate change policies are analyzed Most papers also provide useful information on the economic features of the Kyoto Protocol its possible extensions and the effect of different implementation strategies such as the debate on emissions trading ceilings Readership Scientists and policy makers students and specialists in climate related industries members of NGOs and policy advisors
