Proceedings of the CIRP Seminars on Manufacturing Systems, 1996 Control of Industrial Systems, 1997 The IFAC Conference on Control of Industrial Systems CIS 97 was organized by the Ecole Nationale d'Ingénieurs It was devoted to Control for the Future of the Youth and linked the control science with the control engineering in the framework of industrial systems control The wide diversity of topics high quality theoretical impact and applications of contributed results acknowledged the following Control which is mainly automatic today is the brain of every industrial system Industrial systems automatic control necessitates a permanent interaction between systems and control science and control engineering Automatics is a self contained and complete scientific and engineering discipline on automatic control and as such it has been interacting with almost all other scientific engineering and social areas Automatic control implies new job forms and qualifications thus representing the area of the widely growing research and professional possibilities for pacific contributions to the well being of humanity Automatics is one of the most perspective disciplines open to young engineers and scientists *Advanced Information Systems Engineering* Anne Persson, Janis Stirna, 2004-08-18 th CAiSE 2004 was the 16 in the series of International Conferences on Advanced Information Systems Engineering In the year 2004 the conference was hosted by the Faculty of Computer Science and Information Technology Riga Technical University Latvia Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering The conference theme of CAiSE 2004 was Knowledge and Model Driven Information Systems Engineering for Networked Organizations Modern businesses and IT systems are facing an ever more complex environment characterized by openness variety and change Organizations are coming less self sufficient and increasingly dependent on business partners and other actors These trends call for openness of business as well as IT systems i.e. the ability to connect and interoperate with other systems Furthermore organizations are experiencing ever more variety in their business in all conceivable dimensions The different competencies required by the workforce are multiplying In

the same way the variety in technology is overwhelming with a multitude of languages platforms devices standards and products Moreover organizations need to manage an environment that is constantly changing and where lead times product life cycles and partner relationships are shortening The demand of having to constantly adapt IT to changing technologies and business practices has resulted in the birth of new ideas which may have a profound impact on the information systems engineering practices in future years such as autonomic computing component and services marketplaces and dynamically generated software
