Political Economy and Grand Strategy Mark R. Brawley, 2009-09-10 This book examines traditional balance of power theory from a political economic perspective using historical examples to draw out distinctions between the liberal and realist approach and how this affects grand strategy The realist view of the balance of power theory includes implicit assumptions that economic assets can be turned quickly into power and that states always respond to threats quickly and only with a view to the short run These assumptions drive many of the expectations generated from traditional balance of power theory discouraging realists from looking at domestic sources of power which in turn undermined their ability to frame strategic decisions properly By thinking about how power must be managed over time however we can model the choices policy makers confront when determining expenditures on defense while keeping an eye on the impact of those costs on the economy By emphasizing the role of the state identifying different causal patterns in domestic politics and demonstrating the importance of systemic competition this book aims to establish why a neo classical realist approach is not only different from a liberal approach but also superior when addressing questions on grand strategy This book will be of much interest to students of security studies international political economy grand strategy and IR theory in general Mark R Brawley is Professor of Political Science at McGill University Montreal Canada He is author of several books on International Relations specialising in the connections between political economic issues and security

Why Communism Failed Jasper Becker, 2022-11-01 Communism was destroyed not from without but from within by a persistent failure to make its economic theories work in practice But what exactly did go wrong with its central planning Until the last moment top western economists claimed that Communism was superior to western models Even now centralized Marxist planning retains its admirers especially among the young With the benefit of new archival research we can finally grasp how falsified and manipulated statistics blindfolded Communist governments and confused western leaders leading to staggering errors of judgement Both sides believed that East Germany had a stronger economy than West Germany that North Korea would overtake South Korea that Mao's China was a paradise for its starving peasants Those who warned that a dearth of reliable economic data would condemn central planning to irrational misallocation of investment and labor were ignored or belittled But ultimately they were vindicated Jasper Becker answers the big question what accounts for the fall of Communism in the Soviet Union China and everywhere else And why don't present debates acknowledge that failure This unconventional history of Communism and the Cold War explains why the same old clash of theories is continuing to shape the world today
