Gallaher, Albert N. Link, Jeffrey E. Petrusa, 2007-01-24 Using a cutting edge structure where a current description of the service sector and up to date case studies are compared and contrasted with innovative activity in manufacturing this book contributes towards a better theoretical understanding of innovation in the U S service sector The U S service sector is the largest sector in the U S economy and accounts for an increasingly significant share of U S gross domestic product currently 68 percent Both in the United States as well as in other industrialized nations the service sector is a dynamic component of economic activity and growth As pervasive and economically important as the service sector is innovative activity in service sector firms remains somewhat of an enigma it is not well understood and not well defined because it differs dramatically from the traditional model of innovation in manufacturing Innovation in the U S Service Sector fills this void placing emphasis on the United States but with global relevance It is essential reading for all students of business and management economics and political science The Economics and Econometrics of Innovation David Encaoua, Bronwyn H. Hall, François Laisney, Jacques Mairesse, 2013-03-09 During the past few decades the interest of economists in the sources of long term economic growth has led an increasing number of them to focus on the role of innovation in creating that growth Although some researchers have always been interested in this topic the groundbreaking work of Solow 1957 Nelson 1959 and Arrow 1962 made many other economists recognize the central role played by innovation in almost all spheres of economic activity The Economics and Econometrics of Innovation presents a valuable overview of the work of the world s most renowned experts in the field of innovation and technical change It collects 22 outstanding contributions that reflect the results of the vast worldwide research efforts and remind us of the importance of economic incentives in shaping and directing innovative activities The volume presents an edited selection of papers that were first presented at the 10th International ADRES conference One particular goal of this book is to bring out the complementary nature of the various approaches to innovation and to facilitate in depth dialogues both between microeconomists and macroeconomists and between theoreticians and econometricians General topics that are considered range from the economy wide effects of innovation on growth and employment to the variation of individual firm innovative performance from the analysis of networks and standardization to the role of intellectual property rights and the assessment of knowledge spillovers Besides the wealth of information presented in the chapters readers of this volume will

Exploiting Intellectual Property To Promote Innovation And Create Value Joe Tidd, 2017-10-05 There are two traditional views of the role of intellectual property IP within the field of innovation management in innovation management research as an indicator or proxy for innovation inputs or outputs e.g. patents or licensing income or in innovation management practice as a means of protecting knowledge Exploiting Intellectual Property to Promote Innovation and Create Value argues that whilst both of these perspectives are useful neither capture the full potential contribution of intellectual property in innovation management research and practice The management of IP has become a central challenge in current strategies of Open Innovation and Business Model Innovation but there is relatively little empirical work available Theoretical arguments and empirical research suggest that from both an innovation policy and management perspective the challenge is to use IP to encourage risk taking and innovation and that a broader repertoire of strategies is necessary to create and capture the economic and social benefits of innovation This book identifies how intellectual property can be harnessed to create and capture value through exploiting new opportunities for innovation It is organized around three related themes public policies for IP firm strategies for IP and creating value from IP and offers insights from the latest research on IP strategies and practices to create and capture the economic and social benefits of innovation
