**Safe Passage** Institute of Medicine, Board on Health Sciences Policy, Committee on Creating a Vision for Space Medicine During Travel Beyond Earth Orbit, 2001-11-20 *Safe Passage Astronaut Care for Exploration Missions* sets forth a vision for space medicine as it applies to deep space voyage. As space missions increase in duration from months to years and extend well beyond Earth's orbit, so will the attendant risks of working in these extreme and isolated environmental conditions. Hazards to astronaut health range from greater radiation exposure and loss of bone and muscle density to intensified psychological stress from living with others in a confined space. Going beyond the body of biomedical research, the report examines existing space medicine clinical and behavioral research and health care data and the policies attendant to them. It describes why not enough is known today about the dangers of prolonged travel to enable humans to venture into deep space in a safe and sane manner. The report makes a number of recommendations concerning NASA's structure for clinical and behavioral research on the need for a comprehensive astronaut health care system and on an approach to communicating health and safety risks to astronauts, their families, and the public. However, human space flight remains an endeavor with substantial risks, and these risks must be identified, managed, and mitigated appropriately to achieve the nation's goals in space. The Bioastronautics Roadmap (BR) is the result of extensive commendable efforts on the part of NASA to prioritize research efforts to meet these challenges. In 2003, NASA asked the Institute of Medicine (IOM) in collaboration with the Division on Engineering and Physical Sciences of the

National Academies to conduct a review of the BR Specifically NASA asked the committee to 1 conduct a comprehensive assessment and report of the strengths and weaknesses of the content and processes of the Bioastronautics Roadmap as applied to the missions described in the President's exploration initiative and 2 identify the unique challenges for accomplishing its goals and objectives In September 2004 the committee released its preliminary report to NASA entitled Preliminary Considerations Regarding NASA's Bioastronautics Critical Path Roadmap That document presented the committee's preliminary conclusions about the strengths and weaknesses of the April 2004 version of the BR This report A Risk Reductions Strategy for Human Exploration of Space builds on those preliminary conclusions and provides recommendations to NASA about how to address the issues identified by the committee *Psychology of Space Exploration: Contemporary Research in Historical Perspective* Douglas A. Vakoch, National Aeronautics and Space Administration, 2011-07-06 This book explores some of the contributions of psychology to yesterday's great space race today's orbiter and International Space Station missions and tomorrow's journeys beyond Earth's orbit It provides an analysis of the challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space

**Recapturing a Future for Space Exploration** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30 More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA's success in human space exploration has depended on the agency's ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development

of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good

*A Constrained Space Exploration Technology Program* National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee to Review NASA's Exploration Technology Development Program, 2009-01-29 In January 2004 President George W Bush announced the Vision for Space Exploration VSE which instructed NASA to Extend human presence across the solar system starting with a human return to the Moon by the year 2020 in preparation for human exploration of Mars and other destinations among other objectives As acknowledged in the VSE significant technology development will be necessary to accomplish the goals it articulates NASA's Exploration Technology Development Program ETDP is designed to support develop and ultimately provide the necessary technologies to meet the goals of the VSE This book a review of the ETDP is broadly supportive of the intent and goals of the VSE and finds the ETDP is making progress towards the stated goals of technology development However the ETDP is operating within significant constraints which limit its ability to successfully accomplish those goals the still dynamic nature of the Constellation Program requirements the constraints imposed by a limited budget the aggressive time scale of early technology deliverables and the desire to fully employ the NASA workforce

**Psychology of Space Exploration: Contemporary Research in Historical Perspective** Douglas A. Vakoch, National Aeronautics and Space Administration, 2012-01-27 Through essays on topics including survival in extreme environments and the multicultural dimensions of exploration readers will gain an understanding of the psychological challenges that have faced the space program since its earliest days An engaging read for those interested in space history and psychology alike this is a highly relevant read as we stand poised on the edge of a new era of spaceflight Each essay also explicitly addresses the history of the psychology of space exploration

**Building a Space-Faring Civilization** Michael Schmidt A, Marianne Legato J, 2025-02-03 Building a Space Faring Civilization Advancing the Renaissance of Science Medicine and Human Performance in Civilian Spaceflight explores an expanding unique new

trajectory for humankind the settlement of space by civilians For the first time in history average humans can contemplate journeys to Earth orbit the Moon and Mars with the idea of space settlement as a plausible reality As the numbers of spacefaring civilians grow medical personnel will be asked to meet their complex needs through an ever expanding discipline space medicine But this will require a rapidly advancing science to address what some are calling the next great age in space This book gathers some of the most accomplished thought leaders in the field of human spaceflight today Collectively they helped build the international space station ISS develop the field of orbital medicine guide the development of commercial orbital platforms plan missions to the Moon and Mars and forge the innovation necessary for the commercial spaceflight industry to thrive today The result is an exceptional source of wisdom experience and insight surrounding the current biomedical technical industrial legal and social implications of what is emerging as a true renaissance period in human history Describes the lessons learned from past explorers from the Renaissance to the present and how they can guide space exploration today Characterizes the risks encountered in the exploration and settlement of different domains of space Surveys the types of medical incidents civilian space travelers are likely to encounter based on professional astronaut reports Summarizes the types of biomedical assessment civilian space travelers will require in order to ready themselves for the dangers of space Explores the types of preparation training and medical countermeasures needed to live and work in space

**Systems Medicine For Human Spaceflight** Mark J Shelhamer,Erik Antonsen,2024-03-19 This edited volume makes the case that a systems approach is needed for long term spaceflight missions Due to distance from Earth and the impossibility of resupply or rapid return these flights will entail unprecedented autonomy on the part of the crew This autonomy includes the need for local clinical decision support and other assistance with urgent medical concerns The advantage of a systems approach to medical needs in human spaceflight is that it enables a systematic and repeatable methodology for identifying and developing the individual pieces of the spacecraft systems based on the human system needs that are unique to that problem and environment The book begins by introducing a systems basis for thinking about humans in space It describes existing models and paradigms of systems medicine as well as the tools and analytical approaches involved A tantalizing peek at preliminary applications of systems medicine in NASA is provided As systems in human spaceflight continue to evolve for the foreseeable future it is argued that a systems approach will help to ensure that the evolution of the relevant sub systems is centered on optimal human system function across the unique spaceflight needs of the developing customer base The discussions on balancing the needs of the mission versus the maintenance of crew health medical risk and liability for commercial spaceflights and the need to anticipate what the next medical issues might be will hopefully leave readers cautiously optimistic about this new frontier of applied science *Nanomedical Device and Systems Design* Frank Boehm,2013-11-18 *Nanomedical Device and Systems Design* Challenges Possibilities Visions serves as a preliminary guide toward the inspiration of specific investigative pathways that may lead to meaningful discourse and

significant advances in nanomedicine nanotechnology This volume considers the potential of future innovations that will involve nanomedical devices and systems It endeavors to explore remarkable possibilities spanning medical diagnostics therapeutics and other advancements that may be enabled within this discipline In particular this book investigates just how nanomedical diagnostic and therapeutic devices and systems might ultimately be designed and engineered to accurately diagnose and eradicate pathogens toxins and myriad disease states This text utilizes an author conceptualized exemplar nanodevice and system the Vascular Cartographic Scanning Nanodevice VCSN to explore various prospective design considerations that might facilitate and enable selected functionalities of advanced autonomous nanomedical devices It showcases a diverse group of expert contributing authors who describe actual laboratory based research aimed at the advancement of nanomedical capabilities It also articulates more highly conceptual nanomedical possibilities and visions relating to the implementation of nanomedical technologies in remote regions and the developing world as well as nanomedicine in space applications human augmentation and longevity Investigates nanomedical diagnostic and therapeutic strategies that might be applied in remote regions and the developing world Discusses how nanomedicine might be utilized in space applications inclusive of spacesuits spacecraft future human habitats on the Moon and Mars and deep space Covers how nanomedicine may be implemented in selected forms of human augmentation and toward the potentially radical extension of the human life span This book benefits undergraduate and graduate students who are studying nanotechnology nanomedicine as well as medical administrative scientific research and manufacturing professionals in this industry

*On Orbit and Beyond* Douglas A. Vakoch,2012-12-20 As we stand poised on the verge of a new era of spaceflight we must rethink every element including the human dimension This book explores some of the contributions of psychology to yesterday s great space race today s orbiter and International Space Station missions and tomorrow s journeys beyond Earth s orbit

Early missions into space were typically brief and crews were small often drawn from a single nation As international cooperation in space exploration has increased over the decades the challenges of communicating across cultural boundaries and dealing with interpersonal conflicts have become all the more important requiring different coping skills and sensibilities than the right stuff expected of early astronauts As astronauts travel to asteroids or establish a permanent colony on the Moon with the eventual goal of reaching Mars the duration of expeditions will increase markedly as will the psychosocial stresses Away from their home planet for extended times future spacefarers will need to be increasingly self sufficient while simultaneously dealing with the complexities of heterogeneous multicultural crews

*On Orbit and Beyond Psychological Perspectives on Human Spaceflight* the second considerably expanded edition of *Psychology of Space Exploration Contemporary Research in Historical Perspective* provides an analysis of these and other challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space This second edition includes an all new section exploring the challenges astronauts will encounter as they travel to asteroids Mars Saturn and the stars requiring an unprecedented level of autonomy Updated essays discuss the increasingly important role of China in human spaceflight In addition to examining contemporary psychological research several of the essays also explicitly address the history of the psychology of space exploration Leading contributors to the field place the latest theories and empirical findings in historical context by exploring changes in space missions over the past half century as well as reviewing developments in the psychological sciences during the same period The essays are innovative in their approaches and conclusions providing novel insights for behavioral researchers and historians alike
