Air Pollution Control Equipment H. Brauer, Y. B. G. Varma, 2012-12-06 This book has arisen directly from a course on Air and Water Pollution Control delivered by the first named author at the Technical University of Berlin. Extractions of this course have been presented in Brazil, Turkey and India. It was at the Indian Institute of Technology of Madras where the first named author got in contact with Professor Varma who turned out to be a suggestive cooperative coauthor. This book is addressed primarily to chemical, environmental and mechanical engineers engaged in the design and operation of equipment for air pollution control. But it will certainly be helpful to chemists and physicists confronted with the solution of environmental problems. Furthermore, it is intended as a text book for engineering courses on environmental protection. The goal of the book is the presentation of knowledge on design and operation of equipment applicable to the abatement of harmful emissions into air. The technology of air pollution control is of relatively young age but it has already achieved a high degree of performance due to the research and development work invested in the last decades in this field. Air Pollution V4 Arthur C. Stern,2014-04-24 Air Pollution Third Edition

Volume IV Engineering Control of Air Pollution focuses on the sampling measurement analysis and monitoring of air pollution. This book discusses the various gas and air cleaning devices used to eliminate or reduce emissions of air polluting substances. Organized into three parts encompassing 21 chapters, this edition starts with an overview of the methods of air pollution control that are designed to minimize the production or emission of contaminants. This book then discusses the techniques of rational air use management which is based on the principle that air quality standards have been set at levels that protect the population from harm with an acceptable margin of safety. This text explores as well the waste disposal process of incineration in which combustible wastes are burned completely under controlled conditions. Other chapters discuss the production of nonferrous metals which has been very significant in the development of the science of air pollution control. Engineers, physicist, chemists, meteorologists, agronomists, toxicologists, sociologists, physicians and lawyers will find this book extremely useful.
