only 35 in 2003 Moreover the protraction of clinical trials has significantly reduced the effective time of patent protection The consequences are devastating Monopoly profits have started to decline and the average costs per new drug have reached a record level of close to US 1 billion today As a result any failure of a new substance in the R D process can lead to considerable losses and the risks of introducing a new drug to the market have grown tremendously Particularly if a company is highly dependent on just a handful of mega selling blockbuster drugs the risks can be even greater For example Pfizer generated about 90% of its worldwide revenues in 2002 with just 8 products Any shortfall of a promising late stage drug candidate would have left Pfizer with a gaping hole in its product portfolio In order to deal with these risks many pharmaceutical companies have started to organize their R D in partnership In fact more than 600 alliances in pharmaceutical R D are signed every year
