The Visioneers W. Patrick McCray, 2012-12-09 The story of the visionary scientists who invented the future In 1969 Princeton physicist Gerard O'Neill began looking outward to space colonies as the new frontier for humanity's expansion A decade later Eric Drexler an MIT trained engineer turned his attention to the molecular world as the place where society's future needs could be met using self replicating nanoscale machines These modern utopians predicted that their technologies could transform society as humans mastered the ability to create new worlds undertook atomic scale engineering and if truly successful overcame their own biological limits The Visioneers tells the story of how these scientists and the communities they fostered imagined designed and popularized speculative technologies such as space colonies and nanotechnologies Patrick McCray traces how these visioneers blended countercultural ideals with hard science entrepreneurship libertarianism and unbridled optimism about the future He shows how they built networks that communicated their ideas to writers politicians and corporate leaders But the visioneers were not immune to failure or to the lures of profit celebrity and hype O'Neill and Drexler faced difficulty funding their work and overcoming colleagues skepticism and saw their ideas co-opted and transformed by Timothy Leary the scriptwriters of Star Trek and many others Ultimately both men struggled to overcome stigma and ostracism as they tried to unshackle their visioning from pejorative labels like fringe and pseudoscience The Visioneers provides a balanced look at the successes and pitfalls they encountered The book exposes the dangers of promotion oversimplification misuse and misunderstanding that can plague exploratory science But above all it highlights the importance of radical new ideas that inspire us to support cutting edge research into tomorrow's technologies

and science fiction imaginaries Analysing texts from Europe North America and South Asia as well as television programmes and films the contributions range from essays which establish genre based trends in the representation of age and ageing to very focused studies of particular texts and concerns As a whole the volume probes the relationship between speculative science fiction and our understanding of what it is to be a human in time the time of our own lives and the times of both the past and the future

Time of Our Lives Tom Kirkwood,2001-01-11 By the year 2050 one in five of the world s population will be 65 or older a fact which presages profound medical biological philosophical and political changes in the coming century In Time of Our Lives Tom Kirkwood draws on more than twenty years of research to make sense of the evolution of aging to explain how aging occurs and to answer fundamental questions like why women live longer than men He shows that we age because our genes evolving at a time when life was nasty brutish and short placed little priority on the long term maintenance of our bodies With such knowledge along with new insights from genome research we can devise ways to target the root causes of aging and of age related diseases such as Alzheimer s and osteoporosis He even considers the possibility that human beings will someday have greatly extended life spans or even be free from senescence altogether Beautifully written by one of the world s pioneering researchers into the science of aging Time of Our Lives is a clear original and above all inspiring investigation of a process all of us experience but few of us understand

Liberation Biology Ronald Bailey,2013-08 The 21st century will undoubtedly witness unprecedented advances in understanding the mechanisms of the human body and in developing biotechnology With the mapping of the human genome the pace of discovery is now on the fast track By the middle of the century we can expect that the rapid progress in biology and biotechnology will utterly transform human life What was once the stuff of science fiction may now be within reach in the not too distant future 20 to 40 year leaps in average life spans enhanced human bodies drugs and therapies to boost memory and speed up mental processing and a genetic science that allows parents to ensure that their children will have stronger immune systems more athletic bodies and cleverer brains Even the prospect of human immortality beckons Such scenarios excite many people and frighten or appall many others Already biotechnology opponents are organizing political movements aimed at restricting scientific research banning the development and commercialization of various products and technologies

and limiting citizens access to the fruits of the biotech revolution In this forward looking book Ronald Bailey science writer for Reason magazine argues that the coming biotechnology revolution far from endangering human dignity will liberate human beings to achieve their full potentials by enabling more of us to live flourishing lives free of disease disability and the threat of early death Bailey covers the full range of the coming biotechnology breakthroughs from stem cell research to third world farming from brain enhancing neuropharmaceuticals to designer babies Against critics of these trends who forecast the nightmare society of Huxley's Brave New World Bailey persuasively shows in lucid and well argued prose that the health safety and ethical concerns raised by worried citizens and policymakers are misplaced Liberation Biology makes a positive optimistic and convincing case that the biotechnology revolution will improve our lives and the future of our children while preserving and enhancing the natural environment
