The Principles of New Ethics IV Wang Haiming, 2020-12-29 From Descartes to Spinoza Western philosophers

have attempted to propose an axiomatic systemization of ethics. However, without consensus on the contents and objects of ethics, the system remains incomplete. This four-volume set presents a model that highlights a Chinese philosopher's insights into ethics after a 22-year study. Three essential components of ethics are examined: meta-ethics, normative ethics, and virtue ethics. In this volume, the author analyzes the relationship between people's sense of reputation, the political and economic status of a nation, and the observation of virtue ethics, and he argues that reputation can encourage people to conform to virtue ethics. In addition, a nation's political and economic status is closely connected to people's virtue ethics. That is, people will have higher virtue ethics when constitutional democracy, a market economy without government control, freedom of speech, and the moral system of liberalism and egalitarianism are established in a nation. This title is an essential read for students and scholars of ethics and philosophy in general.

Social Connectionism Frank Van Overwalle, 2013-03-07. Many of our thoughts and decisions occur without us being conscious of them taking place. Connectionism attempts to reveal the internal hidden dynamics that drive the thoughts and actions of both individuals and groups. Connectionist modeling is a radically innovative approach to theorising in psychology, and more recently in the field of social psychology. The connectionist perspective interprets human cognition as a dynamic and adaptive system that learns from its own direct experiences or through indirect communication from others. Social Connectionism offers an overview of the most recent theoretical developments of connectionist models in social psychology. The volume is divided into four sections, beginning with an introduction and overview of social connectionism. This is followed by chapters on causal attribution, person and group impression formation, and attitudes. Each chapter is followed by simulation exercises that can be carried out using the FIT

simulation program these guided exercises allow the reader to reproduce published results Social Connectionism will be invaluable to graduate students and researchers primarily in the field of social psychology but also in cognitive psychology and connectionist modeling
