Autoimmunity Immunological Recognition of Peptides in Medicine and Biology N. D. Zegers, W.J.A. Boersma, Eric Claassen, 1995-07-19 Immunological Recognition of Peptides in Medicine and Biology gives a state of the art overview on the use of peptides and peptide ligand interactions and the critical role they play in recognition patterns for the regulation of various biological functions A wide range of applications are discussed including some experimental preclinical ones such as epitope mapping peptide libraries and production of amino acid specific antibodies and their therapeutic use in oncology and infectious disease vaccines Each chapter also includes step by step protocols to aid in actual experiments Several alternative techniques and strategies are discussed by different authors offering the reader an opportunity to select the most favorable application for a specific biological problem

Cell-Mediated Immunity in Ruminants Bruno M. L. Goddeeris, William I. Morrison, 1994-02-28 Within the last 10 years the immune system of ruminants especially T cells and their interactions with other cells has been an important topic of study for veterinary immunologists and an area of interest for medical and fundamental immunologists This book brings together all the latest data on ruminant cell mediated immunology In the first half of the book leukocytes and their membrane molecules and cytokines are reviewed Markers tissue distribution functional characterization ontogeny cytokines and histocompatibility are covered in depth in separate chapters In the second half of

the book cell mediated immune responses against infectious diseases such as East Coast fever infectious bovine rhinotracheitis foot and mouth disease maedi visna and gastrointestinal nematodes are analyzed The application of cytokines to ruminants against infectious diseases is also reviewed Dynamics of the Il-2 Cytokine Network and T-cell Proliferation Dorothea Busse,2010 This book adds to a intensively investigated question of immunological research How do regulatory T cells mediate their function to ensure tolerance against self antigen The author analyzes the interaction via the cytokine interleukin 2 between T helper cells which mediate immune responses and regulatory T cells Since both cell types depend on interleukin 2 to mediate their functions competition for interleukin 2 is likely A mathematical model is developed to describe the interaction This model focuses on the interleukin 2 receptor dynamics on helper and regulatory T cells and the extracellular interleukin 2 diffusion The interleukin 2 receptor dynamics is governed mainly by an autocrine positive feedback loop on both cell types However its differential regulation results in a switch like up regulation of the receptors on T helper cells and a gradual adaptation of the receptor levels to extracellular interleukin 2 supply on regulatory T cells This difference enables regulatory T cells to efficiently compete for interleukin 2 and deprive T helper cells of their growth factor Cell culture experiments verify these findings It can be shown that the antigen stimulus and the intercellular distance are relevant control parameters for competition Other mechanisms are described for suppression of T helper cell action by regulatory T cells competition for interleukin 2 may act in concert with them Mandell, Douglas, and Bennett's Principles and Practice of Infectious Diseases E-Book John E. Immune Response and the Eye Jerry Y. Niederkorn, Henry J. Kaplan, 2007 The second edition of *Immune Response and the Eye* highlights recent insights into the dangerous compromise between the immune system and the eye which protects the eye against pathogens while limiting inflammation and immune mediated injury to ocular tissues with little or no regenerative potential It discusses the broad spectrum of physiological immunological anatomical and biochemical adaptations that conspire to closely regulate the tone and tenor of immune responses in the eye This volume further describes immune mediated diseases that occur when the compromise between the immune system and the eye is breached This breakdown in immune privilege threatens the vision of millions each year Finally recent advances in ocular immunology are presented which offer potential therapeutic applications in corneal and retinal transplantation and in the management of blinding autoimmune diseases of the eye Eye researchers ophthalmologists and immunologists will appreciate the state of the art and authoritative information presented in *Immune Response and the Eye*
