**Obsolescence** Daniel M. Abramson, 2016-02-12 In our architectural pursuits we often seem to be in search of something newer grander or more efficient and this phenomenon is not novel In the spring of 1910 hundreds of workers labored day and night to demolish the Gillender Building in New York once the loftiest office tower in the world in order to make way for a taller skyscraper The New York Times puzzled over those who would sacrifice the thirteen year old structure as ruthlessly as though it were some ancient shack In New York alone the Gillender joined the original Grand

Central Terminal the Plaza Hotel the Western Union Building and the Tower Building on the list of just one generation's razed metropolitan monuments In the innovative and wide ranging *Obsolescence* Daniel M Abramson investigates this notion of architectural expendability and the logic by which buildings lose their value and utility The idea that the new necessarily outperforms and makes superfluous the old Abramson argues helps people come to terms with modernity and capitalism's fast paced change *Obsolescence* then gives an unsettling experience purpose and meaning Belief in obsolescence as Abramson shows also profoundly affects architectural design In the 1960s many architects worldwide accepted the inevitability of obsolescence experimenting with flexible modular designs from open plan schools offices labs and museums to vast megastructural frames and indeterminate building complexes Some architects went so far as to embrace obsolescence's liberating promise to cast aside convention and habit envisioning expendable short life buildings that embodied human choice and freedom Others we learn were horrified by the implications of this ephemerality and waste and their resistance eventually set the stage for our turn to sustainability the conservation rather than disposal of resources Abramson's fascinating tour of our idea of obsolescence culminates in an assessment of recent manifestations of sustainability from adaptive reuse and historic preservation to postmodernism and green design which all struggle to comprehend and manage the changes that challenge us on all sides

production and Fordism its accompanying ideology first in the United States and then in Nazi Germany and the Soviet Union

*Chicago Made* Robert Lewis, 2009-05-15 From the lumberyards and meatpacking factories of the Southwest Side to the industrial suburbs that arose near Lake Calumet at the turn of the twentieth century manufacturing districts shaped Chicago's character and laid the groundwork for its transformation into a sprawling metropolis Approaching Chicago's story as a reflection of America's industrial history between the Civil War and World War II *Chicago Made* explores not only the well documented workings of centrally located city factories but also the overlooked suburbanization of manufacturing and its profound effect on the metropolitan landscape Robert Lewis documents how manufacturers attracted to greenfield sites on the city's outskirts began to build factory districts there with the help of an intricate network of railroad owners real estate developers financiers and wholesalers These immense networks of social ties organizational memberships and financial relationships were ultimately more consequential Lewis demonstrates than any individual achievement Beyond simply giving Chicago businesses competitive advantages they transformed the economic geography of the region Tracing these transformations across seventy five years *Chicago Made* establishes a broad new foundation for our understanding of urban industrial America

**Architectures of Bureaucracy** Jens van de Maele, 2025-01-27 This monograph examines the interrelationship between politics and modernist architecture in interwar Belgium focusing on political architectural and administrative elites as propagators of new ideas of governance While Belgium was strongly influenced by neighbouring France and Germany it also developed its own avant garde approaches to socio political problems In the second half of the 1930s the country was the scene of a remarkable political and architectural experiment involving an ambitious plan for the large scale construction of modernist government office buildings These buildings were seen as essential to the development of a technocratic model of governance aimed at strengthening the role of the executive and minimising the influence of parliament More specifically the efficient new office architecture was supposed to create a new type of perfect civil servant whose loyalties would no longer lie with political parties but with scientists and management experts Such experts and scientists constituted a rising elite of *homines novi* with strong though often veiled political ambitions As such this book contributes to our understanding of political culture in the age of extremes

**Louise Blanchard Bethune** Johanna Hays, 2014-02-07 Louise Blanchard Bethune the subject of this biography was America's first female professional architect She belonged to the influential group of pioneer architects Daniel Burnham John Root and Louis Sullivan who supported her in becoming a fellow of the American Institute of Architects In the booming industrial city of Buffalo she preceded Frank Lloyd Wright and Alfred Kahn in factory design and was the key designer of the modern urban public school building developing standards still used today During her career 1881 1905

Bethune was consistently one of the most successful architects practicing in Buffalo and the driving force behind New York State's professional organizations for architects. Beyond setting standards for public schools, she was the go-to architect for factories, warehouses, police stations, a Nikola Tesla power transfer station, and the largest luxury hotel of the early 1900s. Bethune moved from a small town on the Erie Canal, the economic and technological marvel of the antebellum period, to a rapidly industrializing major American city following the urban migration of many Americans. Unlike many women of her day, she seized the promise of the growing nation to pursue life, liberty, and happiness in an occupation of her choice and succeeded.
