***Computer Aided Process and Product Engineering (CAPE)*** Luis Puigjaner, Georges Heyen, 2007-01-02. Computer aided process engineering CAPE tools have been very successfully used in process design and product engineering for a long time. In particular, simulation and modelling tools have enabled engineers to analyse and understand the behaviour of selected processes prior to building actual plants. The aim of design or retrofit of chemical processes is to produce profitably products that satisfy the societal needs, ensuring safe and reliable operation of each process as well as minimising any effects on the environment. This involves the conceptual design or retrofit of plants and processes, novel manufacturing approaches, process control system design, interactions and operability, manufacturability, environmental and safety issues. Backed by current studies, this 2 volume set gives a comprehensive survey of the various approaches and latest developments on the use of CAPE in the process industry. An invaluable reference to the scientific and industrial community in the field of computer aided process and product engineering.

***Process Chemistry of Petroleum Macromolecules*** Irwin A. Wiehe, 2008-06-20. Although there is a shortage of light petroleum, there is plenty of heavy petroleum rich in macromolecules available, creating an increasing interest for processes that can convert heavy oils to light oils. *Process Chemistry of Petroleum Macromolecules* provides the scientific basis for such processes, presenting methods to determine improvement potential. Topics include characterization, thermal kinetics, phase behavior and separation. Revealing that the science of petroleum macromolecules is simpler and more exciting than imagined, it also discusses macromolecules that self associate, liquid crystalline phases, reactions triggered by phase separation and both dispersed and dissolved solutes.

The book pays particular attention to flow instabilities that affect the rate of production and the methods used to prevent and eliminate flow instabilities in order to increase product

***Guidelines for Inherently Safer Chemical Processes*** CCPS (Center for Chemical Process Safety), 2019-10-16. Since the publication of the second edition, several United States jurisdictions have mandated consideration of inherently safer design for certain facilities. Notable examples are the inherently safer technology (IST) review requirement in the New Jersey Toxic Chemical Prevention Act (TCPA) and the Inherently Safer Systems Analysis (ISSA) required by the Contra Costa County, California Industrial Safety Ordinance. More recently, similar requirements have been proposed at the U S Federal level in the pending EPA Risk Management Plan (RMP) revisions. Since the concept of inherently safer design applies globally with its

origins in the United Kingdom the book will apply globally The new edition builds on the same philosophy as the first two editions but further clarifies the concept with recent research practitioner observations added examples and industry methods and discussions of security and regulatory issues Inherently Safer Chemical Processes presents a holistic approach to making the development manufacture and use of chemicals safer The main goal of this book is to help guide the future state of chemical process evolution by illustrating and emphasizing the merits of integrating inherently safer design process related research development and design into a comprehensive process that balances safety capital and environmental concerns throughout the life cycle of the process It discusses strategies of how to substitute more benign chemicals at the development stage minimize risk in the transportation of chemicals use safer processing methods at the manufacturing stage and decommission a manufacturing plant so that what is left behind does not endanger the public or environment
