Vehicle Integration in a Smart Microgrid Environment Mohammad Saad Alam,Mahesh Krishnamurthy,2021-08-19
Electric Vehicle Integration in a Smart Microgrid Environment The growing demand for energy in today s world especially in the Middle East and Southeast Asia has been met with massive exploitation of fossil fuels resulting in an increase in environmental pollutants In order to mitigate the issues arising from conventional internal combustion engine powered vehicles there has been a considerable acceleration in the adoption of electric vehicles EVs Research has shown that the impact of fossil fuel use in transportation and surging demand in power owing to the growing EV charging infrastructure can potentially be minimized by smart microgrids As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design it has become clear that there is a need for a system level understanding of energy storage and management in a microgrid environment Practical issues such as fleet management coordinated operation repurposing of batteries and environmental impact of recycling and disposal need to be carefully studied in the context of an ageing grid infrastructure This book explores such a perspective with contributions from leading experts on planning analysis optimization and management of electrified transportation and the transportation infrastructure The primary purpose of this book is to capture state of the art development in smart microgrid management with EV integration and their applications It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains from smart homes to smart cities and within industry business and consumer applications We expect the book to serve as a

reference for a larger audience including power system architects practitioners developers new researchers and graduate level students especially for emerging clean energy and transportation electrification sectors in the Middle East and Southeast Asia

The Routledge Research Companion to Electronic Music: Reaching out with Technology

Simon Emmerson,2018-05-16 The theme of this Research Companion is connectivity and the global reach of electroacoustic music and sonic arts made with technology The possible scope of such a companion in the field of electronic music has

changed radically over the last 30 years. The definitions of the field itself are now broader; there is no clear boundary between electronic music and sound art. Also, what was previously an apparently simple divide between art and popular practices is now not easy or helpful to make, and there is a rich cluster of streams of practice with many histories, including world music traditions. This leads in turn to a steady undermining of a primarily Euro American enterprise in the second half of the twentieth century. Telecommunications technology, most importantly the development of the internet in the final years of the century, has made materials, practices and experiences ubiquitous and apparently universally available, though some contributions to this volume reassert the influence and importance of local cultural practice. Research in this field is now increasingly multi disciplinary. Technological developments are embedded in practices which may be musical, social, individual and collective. The contributors to this companion embrace technological, scientific, aesthetic, historical and social approaches, and a host of hybrids, but most importantly they try to show how these join up. Thus the intention has been to allow a wide variety of new practices to have voice, unified through ideas of reaching out and connecting together, and in effect showing that there is emerging a different kind of global music.

Investing in information and communication technologies to reach gender equality and empower rural women Food and Agriculture Organization of the United Nations, 2019-05-13. Advances in information and communication technologies (ICTs) have made information available to more people than ever before. These advances have also substantially increased their capacity to connect with each other in a continuously expanding number of ways. Rural women are currently and have always been last in line in terms of ICT access and use, even though women stand more to gain than most from active participation and engagement with these resources. Evidence suggests that the ICT sector is both urban and male centric, ranging from the design of ICTs to the gender of sector employees and decision makers. Representation in the media is also predominantly male. The aim of this paper is to bring rural communities and women and other marginalized groups in particular back into the centre of conversations on ICTs and ICT4D.

Handbook of Research on Implementing Digital Reality and Interactive Technologies to Achieve Society 5.0 Ugliotti, Francesca Maria, Osello, Anna, 2022-06-30. Research on digital reality has been extensive in recent years, covering a wide range of topics and leading to new ways to approach and deal with complex situations. Within the Society 5.0 paradigm, people and machines establish a positive relationship to find solutions for social aspects and problems. This perspective establishes a strong interconnection between physical and virtual space, making the user an active player for better life and society. In these terms, digital systems and virtual and augmented reality technologies enable multi dimensional scenarios and additional levels of interdisciplinary collaboration to create a highly inclusive communication network and social framework. The Handbook of Research on Implementing Digital Reality and Interactive Technologies to Achieve Society 5.0 provides an overview of methods, processes and tools adopted to achieve super smart society needs by exploiting digital reality and interactive technologies. It includes case studies that illustrate applications that place people's quality of life at the center of the
