Reaching Young Autistic Child Pb:

Clinical Behavior Therapy with Children Thomas H. Ollendick, Jerome A. Cerny, 2013-03-08 As noted by its title the focus of this book is centered on an examination of behavior therapy with children in clinical settings Throughout our goal has been to examine theoretical underpinnings review empirical research and illustrate clinical utility for a variety of behavioral procedures with children In pursuing this goal we have described child behavior therapy as an approach based on empirical methodology derived from behavioral principles and focused upon adjustment disorders of children The hallmark of such an approach is its accountability the extent to which the procedures and techniques presented in this text are demonstrably accountable must be determined at least partially by the reader As students of child behavior we have become sensitized to two trends in behavior therapy with children during the preparation of this book First we have been concerned with the simple application of behavioral procedures to children irrespective of developmental considerations All too frequently assessment strategies and treatment procedures found to be useful with adults have been applied to children in an indiscriminate fashion For example some recent studies have examined and assessed the very same social skill deficits in children as in adults e g lack of eye contact delayed latency of response and absence of positive commendatory responses Surely skill deficits differ from age to age just as they differ from situation to situation

Education and Technology Support for Children and Young Adults With ASD and Learning Disabilities Kats, Yefim, Stasolla, Fabrizio, 2020-11-13 Among the disabilities covered at the state and federal levels autism and related conditions are a sharply growing diagnostic category among children and young adults In education administrators and practitioners working with affected learners are continually faced with confronting difficult problems such as getting adequate personnel training and choosing appropriate tools and techniques that best fit the specific needs of their students while at the same time satisfying their budget technical resources curriculum and profile of the ASD population they serve The choice of appropriate tools is especially complex due to the intrinsic connection between technical specifications educational therapeutic methods and the wide variety of ASDs and related conditions In this respect tools chosen to support children may need to target those diagnosed not only with ASD but also with such co morbidity conditions as attention deficit disorder The instructional strategies and use of technology currently have room for improvement for online hybrid and face to face counseling settings Also an effective evaluation of educational technologies and tools would be fundamentally incomplete without a thorough understanding and assessment of the related special education practices as well as psychological and neurological issues specific for ASD and learning disabilities

Psychopathology and Child Development Eric Schopler, 2012-12-06 The First International Leo Kanner Colloquium on Child Development Deviations and Treatment explores relationships between experimental research normal development and interventions with early infantile autism as a reference model of relatively unambiguous abnormal development Sponsored by the Treatment and Education of Autistic and related Communications handicapped Children TEACCH Project at the University of North Carolina at Chapel Hill the colloquium tackled the challenge of facilitating communications among scientists of different disciplines working in a specialized area The meeting proved successful in generating an interplay and information exchange among scientists of diverse academic and professional orientation who if not completely able to agree on common factors did nevertheless achieve awareness and clarification of their differences The TEACCH conference and this volume have implications for all research efforts within and outside the domain of mental health This is particularly so at a time of limited dollar resources for research support The present and foreseeable future represent such a time one when communication among fields resource competition between basic and applied research biomedical versus psychosocial research and the question of research utilization assume a new commanding significance Thus the question of accountability for research has come to the fore

Mental Health Interventions with Preschool Children Robert D. Lyman, Toni L. Hembree-Kigin, 2013-11-11 Preschool children have been largely neglected in the mental health treatment literature although research has established that many behavioral and emotional disorders in children result from events occurring during the preschool years or are first manifested during this period This has occurred for

several reasons Traditional psychoanalytic thinking has considered preschoolers to be too psychologically immature for complete manifestations of psychopathology and the limited language abilities of young children have complicated assessment procedures and made them less appropriate for treatment approaches that are largely verbal in nature In addition the developmental complexity of the preschool period has deterred many researchers from investigating clinical issues with this age group Partly as a result of the lack of information on preschoolers in the literature practitioners have historically been uncomfortable in conducting assessments and initiating treatment with young children They have often adopted a wait and see attitude in which formal mental health diagnosis and treatment are not implemented until after the child's entry into school Unfortunately such a delay may mean wasting the time during which mental health interventions can be maximally effective Recently this attitude has changed and practitioners now recognize the need for assessment and treatment of behavioral and emotional disorders early in life What they require to assist them in the timely delivery of such services is information about assessment and treatment procedures specifically designed for preschoolers and with demonstrated efficacy with that age group
