Redesigning Health Care Delivery:

Redesigning Healthcare Delivery Peter Boland, 1996 One of the greatest challenges in health care is reorganizing its core processes These reorganization initiatives are most often pursued under pressure from employers consumers advances in medical technologies and changes in payer policy Redesigning Healthcare Delivery teaches practitioners managers and executives proven new ways to predict and manage the needs of patient populations improve customer service and refocus their organizations on administrative and clinical tasks to ensure future success **Redesigning the US Mental Health**

Care System Sydney S. Harris, Stephen M. Strakowski, 2024 What is commonly referred to in the U S as the mental health care system is not really a system at all While excellent programs exist in every state in every community across America the system is actually a set of fragmented services provided inequitably by a haphazard array of specialty providers often with inadequate resources and only tenuously connected to health care systems for other health needs Crisis is too often the first point of contact for people experiencing a mental illness while year over year increases in rates of anxiety depression traumatic stress and death from suicide and overdose have led many to characterize the current situation as a pandemic or epidemic of mental illness constituting a national emergency For youth and young adults in late 2021 this emergency was formally recognized by the U S Surgeon General in the first Advisory ever issued regarding the nation's mental health

Health System Redesign Joachim P. Sturmberg, 2017-10-28 This forward looking volume challenges professionals and interested lay readers to reconsider our ways of looking at health and wellness illness and disease and the goals of health healthcare systems Reframing health systems as complex adaptive systems the book identifies health care as a central aspect of social care and security for all people particularly the most vulnerable From there the author outlines necessary organizational design medical and community steps toward building health systems that view and practice health care as a human right and can produce optimum care in the long term And extensive illustrations display effective collaborative problem solving within these systems in both intriguing theoretical models and the real world Highlights of the coverage Systems and complexity thinking in health and health care Redesign based on first principles Redesign from an organizational perspective Working together effectively and efficiently to achieve a common purpose Analyzing the workings of health systems as complex adaptive systems Person centered equitable and sustainable health systems achieving the goal Health System Redesign brings a voice and a vision to the most pressing problems in healthcare service delivery and offers new goals and purpose to health policymakers health financiers organizational leaders clinicians and concerned members of the local community **Interdisciplinary Case Studies in Health Care Redesign** Mickey L. Parsons, Carolyn L.

Murdaugh, Robert A. O'Rourke, 1997 Describes approaches to operational redesign and clinical process redesign and provides examples and case studies from the field designed to assist health care professional in redesign Part I examines operational redesign with discussion of the case for change and structure and team processes for **Context Sensitive Health**

Informatics: Redesigning Healthcare Work C. Nøhr, C.E. Kuziemy, Z.S.-Y. Wong, 2017-08-18 Health informatics applications will be a cornerstone of the next generation healthcare delivery system These applications will support the delivery of safe patient centered care and collaborative care delivery The complexity of modern healthcare is delivered by many different specialties to many different patients with complex diseases and comorbidity A one size fits all approach is not adequate to reach the triple aim of improving the patient experience of care improving the health of populations and reducing the per capita cost of healthcare Health informatics applications must rather be built to be adaptable and sensitive to the complex contexts where they will be used The health informatics community has long been interested in the role that context plays in the design implementation and evaluation of Health IT We have come to realize that context is not just a passive characteristic that impacts Health IT usage but rather is embedded in the core of the users processes and outcomes that Health IT interacts with Therefore we need better approaches to study and understand its impact on Health IT usage in different healthcare settings This book contains the conference papers from CSHI 2017 Delivering 21st Century Healthcare Building a Quality and Efficiency Driven System It contains papers on a variety of topics that are divided into four sections Theoretical approaches to investigate context sensitive health informatics to generate robust evidence Redesigning healthcare work practices Patient participation in healthcare design and redesign and Human factors and usability The 2017 CSHI conference continues our efforts to develop robust scientific evidence on context and Health IT

Handbook of Healthcare Delivery Systems Yuehwern Yih, 2016-04-19 With rapidly rising healthcare costs directly impacting the economy and quality of life resolving improvement challenges in areas such as safety effectiveness patient centeredness timeliness efficiency and equity has become paramount Using a system engineering perspective Handbook of Healthcare Delivery Systems offers theoretical foundation

Process Redesign for Health Care Using Lean Thinking David I. Ben-Tovim, 2017-03-16 Process Redesign for Health Care Using Lean Thinking is a response to a simple but hard to answer question and is the result of the experiences of a working doctor who was also the chief safety and quality officer of an Australian teaching hospital At this hospital he observed that the Emergency Department was staff by talented well trained and respected doctors and nurses The facilities were modern and the work load unexceptional but the department was close to melt down Bad things were happening to patients everyone was blaming each other lots of things had been tried but nothing was getting better and no one could explain why The problem was not a lack of technical knowledge or expertise the problem was that no one stood back and said what s the best way to move 200 or 300 patients a day through the complicated and varying sequence of steps needed to sort out the many different problems that bring patients to our department These challenges are faced by hospitals and health services all over the world There are difficulties with patient flow congestion queues inefficient utilization of resources problems engaging clinical staff in improvement programs adverse incidents and budget constraints Lean thinking and value stream analysis gives hospitals and health services struggling with these issues

the insights they need to help themselves This book provides a method that systematically turns those insights into working programs of service and system redesign The book is divided into two sections The first section gives the background to the approach and systematically works through the Process Redesign methodology step by step The second section is a series of case studies that show the methodology in action what worked and what didn't work The goal of any process redesign is simple the right care for the right person at the right time in the right place and right the first time This book helps the people who work in hospitals and health services realize these goals by working together

Remaking Chronic Care in the Age of Health Care Reform Arnold Birenbaum, 2011-09-12 This revealing book tackles the daunting problem of increasing chronic illness in America offering fresh ideas for the ways in which the challenge can be successfully managed Remaking Chronic Care in the Age of Health Care Reform Changes for Lower Cost Higher Quality Treatment is nothing less than a blueprint for a new mode of chronic care It depicts a current system in which there is little financial incentive to furnish coordinated services via appropriate primary care and few penalties for failure to deliver such care Arguing that the current system is unsustainable the book documents efforts that have been made to promote better coordination of care through patient centered medical homes and accountable care organizations Specifically the book focuses on linking the ongoing innovations in health care practices with the supports for scaling up innovations found in the Patient Protection and Affordable Care Act It shows how expanding and improving primary care as the vehicle for care coordination will reduce costs for those with conditions such as arthritis diabetes hypertension or other longstanding disorders but also makes it clear that incentives have to be realigned if such improved primary care is to become a reality
