ABSTRACT. Coral reefs are one of the world's most biologically diverse and productive ecosystems. However, these valuable resources are highly threatened by human activities. Satellite remotely sensed observations enhance our understanding of coral reefs and some of the threats facing them by providing global spatial and time-series data on reef habitats and the environmental conditions influencing them in near-real time. This review highlights many of the ways in which satellites are currently used to monitor coral reefs and their threats, and provides a look toward future needs and capabilities.

This false true-color image of Australia's Great Barrier Reef was acquired by the Multi-angle Imaging Spectro-Radiometer (MISR) instrument on August 26, 2000, and shows part of the southern portion of the reef adjacent to the central Queensland coast. The width of the MISR swath is approximately 380 km, with the reef clearly visible up to approximately 200 km from the coast. Image courtesy of NASA/GSFC/LARC/JP, MISR Team.

Matloff, 2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun *Deep Space Probes* Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today's spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project **Deep-Space Probes** Gregory Matloff, 2000-10-31 This expert guide written by a major figure at the NASA Marshall Spaceflight Center presents an authoritative and comprehensive survey of the present day state of the art in the field of extrasolar and interstellar space exploration focusing on the most promising techniques It looks at potential missions and explores the many exciting ideas being developed to probe the planets and nearby stars for signs of life Because of the tremendous current interest in the search for extrasolar life and extraterrestrial intelligence this is a timely and illuminating survey **Corals in Space and Time** John Edward Norwood Veron, 1995 As concerns about the change in global climate and the loss of biodiversity have mounted attention has focused on the depletion of the ozone layer and the destruction of tropical rainforests But recently scientists have identified another seriously endangered ecosystem coral reefs In *Corals in Space and Time* J E N Veron provides a richly detailed study of corals that will inform investigations of these fragile ecosystems Drawing on twenty five years of research Veron brings together extensive field observations about the taxonomy biogeography paleontology and biology of corals After introducing coral taxonomy and biogeography as well as relevant aspects of coral biology for the non specialist he provides an interpretation of the fossil record and paleoclimates an analysis of modern coral distribution and a discussion of the evolutionary nature and origins of coral species Revealing a sharp conflict between empirical observations about the geographical variation within species Veron introduces a non Darwinian theory of coral evolution He proposes that the evolution of coral species is driven not primarily by natural selection but by constantly shifting patterns of ocean circulation which produce changing variations of genetic connectivity This mechanism of speciation and hybridization has far reaching consequences for the study of all types of corals and potentially many other groups of organisms as well **Living Space** Michael E. Veal, 2024-04-09 *Living Space* John Coltrane Miles Davis and Free Jazz from Analog to Digital fuses biography and style history in order to illuminate the music of two jazz icons while drawing on the discourses of photography and digital architecture to fashion musical insights that may not be available through the

traditional language of jazz analysis The book follows the controversial trajectories of two jazz legends emerging from the 1959 album Kind of Blue Coltrane's odyssey through what became known as free jazz brought stylistic revolution and chaos in equal measure Davis's spearheading of jazz rock fusion opened a door through which jazz's ongoing dialogue with the popular tradition could be regenerated engaging both high and low ideas of creativity community and commerce Includes 42 illustrations
