Reflectors And Localization:

Reflectors and Localization F. Van Oystaeyen, A. Verschoren, 1979

Virtual Topology and Functor Geometry Fred Van Oystaeyen, 2007-11-15 Intrinsically noncommutative spaces today are considered from the perspective of several branches of modern physics including quantum gravity string theory and statistical physics From this point of view it is ideal to devise a concept of space and its geometry that is fundamentally noncommutative Providing a clear introduction to noncommutative

Mathematical and Statistical Methods for Multistatic Imaging Habib Ammari,Josselin Garnier,Wenjia Jing,Hyeonbae Kang,Mikyong Lim,Knut Sølna,Han Wang,2013-11-29 This book covers recent mathematical numerical and statistical approaches for multistatic imaging of targets with waves at single or multiple frequencies The waves can be acoustic elastic or electromagnetic They are generated by point sources on a transmitter array and measured on a receiver array An important problem in multistatic imaging is to quantify and understand the trade offs between data size computational complexity signal to noise ratio and resolution Another fundamental problem is to have a shape representation well suited to solving target imaging problems from multistatic data In this book the trade off between resolution and stability when the data are noisy is addressed Efficient

imaging algorithms are provided and their resolution and stability with respect to noise in the measurements analyzed. It also shows that high order polarization tensors provide an accurate representation of the target. Moreover, a dictionary matching technique based on new invariants for the generalized polarization tensors is introduced. Matlab codes for the main algorithms described in this book are provided. Numerical illustrations using these codes in order to highlight the performance and show the limitations of numerical approaches for multistatic imaging are presented.

Bat Bioacoustics M. Brock Fenton, Alan D. Grinnell, Arthur N. Popper, Richard R. Fay, 2016-06-02 Arguably biosonar is one of the eye opening discoveries about animal behavior and the auditory systems of echolocators are front and center in this story. Echolocation by bats has proven to be a virtual gold mine for colleagues studying neurobiology while providing many rich examples of its impact on other areas of bats' lives. In this volume we briefly review the history of the topic reminding readers of the 1995 *Hearing by Bats*. We use a chapter on new findings in the phylogeny of bats to put the information that follows in an evolutionary context. This includes an examination of the possible roles of Prestin and FoxP2 genes and various anatomical features affecting bat vocalizations. We introduce recent work on the role of noseleaves, ears and other facial components on the focusing of sound and collection of echoes.

Mobile Lightweight Wireless Systems Periklis Chatzimisios, Christos Verikoukis, Ignacio Santamaria, Massimiliano Laddomada, Oliver Hoffmann, 2010-10-21 Following the success of the First MOBILIGHT 2009 in Athens, Greece, the Second International Conference on Mobile Lightweight Systems MOBILIGHT was held in Barcelona, Spain, on May 10-12, 2010. It was not an easy decision to carry on organizing a scientific event on wireless communications where competition is really enormous. This decision was motivated by discussion with many colleagues about the current unprecedented demand for lightweight wireless communication devices with high usability and performance, able to support added value services in a highly mobile environment. Such devices follow the users everywhere they go: at work, at home, while travelling, in a classroom, etc., and result in exciting research, development and business opportunities. Such scenarios clearly demand significant upgrades to the existing communication paradigm in terms of infrastructure, devices and services to support the anytime, anywhere, any device philosophy, providing novel and fast evolving requirements and expectations on search and development in the field of information and communication technologies. The core issue is to support wireless users' desire for 24/7 network availability and transparent access to their own services. In this context, we continue to envision an international forum where practitioners and researchers coming from the many areas involved in lightweight wireless systems design and deployment would be able to interact and exchange experiences.
