Regenerative Development and Design Regenesis Group,2016-09-06 The evolution of sustainability with a practical framework for integration Regenerative Development and Design takes sustainability to the next level and provides a framework for incorporating regenerative design principles into your current process The Regenesis Group is a coalition of experienced design land use planning business and development professionals who represent the forefront of the movement in this book they explain what regenerative development is how and why it works and how you can incorporate the fundamental principles into your practice A clear focused framework shows you how to merge regenerative concepts with your existing work backed by numerous examples that guide practical application while illustrating regenerative design and

development in action As the most comprehensive and systemic approach to regenerative development this book is a must have resource for architects planners and designers seeking the next step in sustainability Regenerative design and development positions humans as co creative and mutually evolving participants in an ecosystem not just a built environment. This book describes how to bring that focus to your design from the earliest stages Understand the fundamentals of regenerative design and development Learn how regenerative development contributes to sustainability Integrate regenerative development concepts into practice Examine sample designs that embody the regenerative concept. To create a design with true sustainability considerations must extend far beyond siting materials and efficiency Designers must look at the place it is inhabitants and the purpose the whole living ecosystem and proceed with their work from that more humbling perspective. The finished product should itself be an ecosystem and sustainable economy which is the root of the regenerative development approach Sustainability has evolved and the designer is responsibility has increased in kind Regenerative Development and Design provides an authoritative resource for those ready to take the next step forward

Regenerative-Adaptive Design for Sustainable Development Phillip B. Roös, 2020-09-15 In this book the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that incorporates the principles of regenerative design as well as an adaptive pattern language that re establishes our wholeness with nature and considers the vulnerabilities of a changing landscape The book examines an integral approach to contemporary theories of planning and design that explores the human nature relationship patterns in social and spatial interconnections between people and their natural environments The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature In 12 chapters the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities responses for sustainable development The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia The concluding chapters argues that for human settlements and cities to be resilient and sustainable we must understand the interconnected patterns of human built environments and natural systems and how we function in a social spatial dimension with these The book is intended for practitioners and academic scholars with interest in sustainable development regenerative design pattern languages biophilia settlement planning and climate change adaptation

Synergistic Design of Sustainable Built Environments Chitrarekha Kabre, 2020-11-09 Synergistic Design of Sustainable Built Environments introduces and illustrates a novel systems approach that fosters both design excellence and a leap toward a more biocentric ecologically sustainable design paradigm The book provides a deeper understanding of the theories and principles of biocentric design and offers detailed descriptions of the synergistic design process of integrating theories and principles into practice It also presents extensive thermal and visual built environment design strategies along with qualitative and quantitative information that designers can use to generate feasible solutions in response to varying climate and occupant comfort Features Examines the principles and practices of the synergistic design a fusion of anthropocentric and biocentric of sustainable built environments and how they relate to practical applications Presents climatic data and its analysis along with sun path diagrams for numerous cities to aid in the design of sustainable built environments in multiple regional contexts Includes numerous case studies of sustainable built environments in varying climatic zones Explains how renewable energy solar wind biomass geothermal hydro fuel cells can be successfully integrated in the built environment This forward thinking and highly illustrated book will be an invaluable reference to all those concerned with sustainable built environments and related architectural issues Carbon-Neutral Architectural Design Pablo M. La Roche, 2024-05-31 The energy used to build and operate buildings is a significant source of greenhouse gas emissions While it is possible to reduce emissions through low carbon design many architects are not trained to do this Filling an urgent need for a design reference in this emerging field this book describes how to reduce building related greenhouse gas emissions through appropriate design techniques It presents strategies to achieve CO2 reductions with an emphasis on control of energy flows through the

building envelope and passive cooling and heating strategies This new revised edition is updated throughout and includes a new section on embodied carbon and new chapters on daylighting and nature based cooling Features Adds new chapters on daylighting and nature based cooling with numerous updates throughout the rest of the chapters Presents strategies illustrated with examples for new construction and existing buildings to reduce energy consumption and reduce emissions Explains the origins of CO2 emissions associated with the operation and fabrication of buildings supplying water disposing of waste from the building and proposes strategies to reduce them Covers carbon calculations thermal comfort indigenous technology climate responsive design passive cooling and heating solar design air flow analysis daylighting building simulation and microclimate design with abundant examples Examines siting location to design buildings that adapt and mitigate their effect on climate change **Designing for Hope** Dominique Hes, Chrisna du Plessis, 2014-10-17 A forward looking book on sustainable design that describes problems and then by providing a different way to conceptualise design and development leads on to examples of regenerative solutions Its aim is to move the discussion away from doing less but still detracting from our ecological capital to positively contributing and adding to this capital This book offers a hopeful response to the often frightening changes and challenges we face arguing that we can actively create a positive and abundant future through mindful contributive engagement that is rooted in a living systems based worldview Concepts and practices such as Regenerative Development Biophilic Design Biomimicry Permaculture and Positive Development are explored through interviews and case studies from the built environment to try and answer questions such as How can projects focus on creating a positive ecological footprint and contribute to community How can we as practitioners restore and enrich the relationships in our projects and How does design focus hope and create a positive legacy Resilience in Asia Oscar Carracedo García-Villalba, Mia M. Bennett, 2022-03-25 The book is organized according to seven inspirations seven ideas and presents a collection of theoretical essays and a set of provocative and innovative solutions to design plan and build urban resilience in uncertain and unpredictable scenarios Led by the National University of Singapore School of Design and Environment presents the research by design results of four consecutive years in four different countries China Philippines Indonesia and Thailand responding to the current challenge of building more resilient cities in front of impacts of climate change such as coastal and river flooding water and air pollution water scarcity urban heat island effect aguifer depletion or subsidence The book brings together the work of highly reputed academics professionals and scholars from 20 universities worldwide with the aim of serving as a guide for mitigating and adapting to the effects of climate change and more specifically to reinstating the environmental qualities of our cities through carbon neutral or carbon net positive urban designs and plans **Ecologies Design** Maibritt Pedersen Zari, Peter Connolly, Mark Southcombe, 2020-07-07 The notion of ecology has become central to contemporary design discourse This reflects contemporary concerns for our planet and a new understanding of the primary entanglement of the human species with the

rest of the world The use of the term ecology with design tends to refer to how to integrate ecologies into design and cities and be understood in a biologically scientific and technical sense In practice this scientific technical knowledge tends to be only loosely employed The notion of ecology is also often used metaphorically in relation to the social use of space and cities This book argues that what it calls the biological and social senses of ecology are both important and require distinctly different types of knowledge and practice It proposes that science needs to be taken much more seriously in biological ecologies and that social ecologies can now be understood non metaphorically as assemblages Furthermore this book argues that design practice itself can be understood much more rigorously productively and relevantly if understood ecologically The plural term ecologies design refers to these three types of ecological design This book is unique in bringing these three perspectives on ecological design together in one place It is significant in proposing that a strong sense of ecologies design practice will only follow from the interconnection of these three types of practice Ecologies Design brings together leading international experts and relevant case studies in the form of edited research essays case studies and project work It provides an overarching critique of current ecologically oriented approaches and offers evidence and exploration of emerging and effective methods techniques and concepts It will be of great interest to academics professionals and students in the built environment disciplines Architectural Research Addressing Societal Challenges Manuel Jorge Rodrigues Couceiro da Costa, Filipa Roseta, Joana Pestana Lages, Susana Couceiro da Costa, 2019-08-08 The escalating interdependecy of nations drives global geopolitics to shift ever more quickly Societies seem unable to control any change that affects their cities whether positively or negatively Challenges are global but solutions need to be implemented locally How can architectural research contribute to the future of our changing society How has it contributed in the past The theme of the 10th EAAE ARCC International Conference Architectural Research Addressing Societal Challenges was set to address these questions This book Architectural Research Addressing Societal Challenges includes reviewed papers presented in June 2016 at the 10th EAAE ARCC International Conference which was held at the facilities of the Faculty of Architecture of the University of Lisbon The papers have been further divided into the following five sub themes a Changing Society In Transit Global Migration Renaturalization of the City Emerging Fields of Architectural Practice and Research on Architectural Education The EAAE ARCC International Conference held under the aegis of the EAAE and of the ARCC is a conference organized every other year in collaboration with one of the member schools universities of those associations alternatively in North America or in Europe Getting to Zero - Beyond Energy Transition Towards Carbon-Neutral Mediterranean Cities Ali Sayigh, Antonella Trombadore, Gisella Calcagno, 2025-06-02 This book contains selected papers from the World Renewable Energy Congress and Network Forum s seventh edition of the biannual Med Green Forum MGF2024 that highlight opportunities for energy transition based on the principles of efficiency urban building integration and ecology Contributions explore possible carbon neutral solutions technologies strategies processes and policies for Mediterranean cities The book

addresses the transformation in the unique socio climatic and cultural context of the Mediterranean basin cities and architecture a transversal topic deeply related to social dynamics and new energy landscapes Designing for the **Circular Economy** Martin Charter, 2018-08-06 The circular economy describes a world in which reuse through repair reconditioning and refurbishment is the prevailing social and economic model. The business opportunities are huge but developing product and service offerings and achieving competitive advantage means rethinking your business model from early creativity and design processes through marketing and communication to pricing and supply Designing for the Circular Economy highlights and explores state of the art research and industrial practice highlighting CE as a source of new business opportunities radical business change disruptive innovation social change and new consumer attitudes The thirty four chapters provide a comprehensive overview of issues related to product circularity from policy through to design and development Chapters are designed to be easy to digest and include numerous examples An important feature of the book is the case studies section that covers a diverse range of topics related to CE business models and design and development in sectors ranging from construction to retail clothing technology and manufacturing Designing for the Circular Economy will inform and educate any companies seeking to move their business models towards these emerging models of sustainability organizations already working in the circular economy can benchmark their current activities and draw inspiration from new applications and an understanding of the changing social and political context This book will appeal to both academia and business with an interest in CE issues related to products innovation and new business models Regenerating Cities Maria Elena Zingoni de Baro, 2022-01-18 This book sets out the discussion on how cities can contribute solutions to some of the challenges the urbanised world is facing such as the pressure of growing populations mitigation of effects of and adaptation to globally changing environmental climate and public health conditions Presenting a detailed explanation of the causes behind the current state of modern cities the book advocates for a paradigm shift to improve the quality of life of ever increasing urban inhabitants whilst nourishing the natural systems that sustain human and non human life in the planet Recognising the precious role that nature plays in the functioning of cities it delves into the study of biophilic design and regenerative development The book argues that these social ecological design approaches can act as catalysts to develop conditions in urban settings that are beneficial for natural and human systems to thrive and flourish both in ecosystem services and social cultural systems This is particularly relevant for the design of new quality precincts or the regeneration of degraded urban spaces to promote health wellbeing and urban resilience A framework is proposed to guide the process of thinking about designing and building healthier more liveable and resilient urban environments that raise the quality of life in cities The method can be used by researchers practitioners urban designers urban planners architects and landscape architects interested in developing their work within a social ecological perspective It can also be used by local governments and agencies to underpin policy making and by educational institutions to prepare graduates with necessary skills to respond

to current and future built environment challenges **Sustainability** Maurie J. Cohen, 2020-10-22 Sustainability is one of the buzzwords of our times and a key imperative for economic growth technological development social equity and environmental quality But what does it really mean and how is it being implemented around the world In this clear eyed book Maurie Cohen introduces students to the concept of sustainability tracing its history and application from local land use practices construction techniques and reorientation of business models to national and global institutions seeking to foster sustainable practices Examining sustainable development in scientific technological social and political terms he shows that it remains an elusive concept and evidence of its unambiguous achievements can be difficult to ascertain Moreover developed and developing countries have formulated divergent agendas to engage the notion of sustainability further complicating its application and progress across the world Innovative and readily accessible to students from a range of disciplines this primer takes us on a journey to show that sustainability is as much about unchartered waters as it is about formulating answers to urgent global issues The Inclusive Economy: Criteria, Principles and Ubuntu Arno J van Niekerk, 2022-08-12 There is one serious missing link at the center of today s capitalism It is a disequilibrium between increased economic interconnectedness and increased isolation exclusion. This unique challenge in the 21st century calls for a unique solution Ubuntu Africa might be the last place where experts would look for an economic solution but it ironically holds the secret to restoring the right equilibrium in the economy Ubuntu's ability to reconnect the marginalised with the mainstream by putting emphasis on our humanness connectedness collective growth through expansion and improved efficiency creates new capacity for the economy to rebalance itself towards genuine and sustainable progress Ubuntu encapsulates that which is the opposite of economic exclusion i e inequality poverty unsustainable growth limited profits etc namely economic inclusion However only a small window of opportunity exists in and after the COVID 19 pandemic to implement Ubuntu as a fundamental economic principle in order for it to be an effective remedy The global economy and most local economies have entered the phase of rebuilding with a serious drawback after the previous global financial crisis both the economy and government s capacity to recover are severely limited as unemployment levels debt levels and natural resource depletion levels keep soaring resulting in dangerous levels of economic exclusion and social instability To this and more the inclusive economy presents tangible solutions Mechanical and Electrical Equipment for Buildings Walter T. Grondzik, Alison G. Kwok, Benjamin Stein, John S.
